

Google for Startups Cloud AI Program

Website repositioning — what was done, and the answers we now need to apply

Purpose of this document: the website work for the Google program is complete. What remains are **company-level facts and decisions that only you can provide**. Once the blockers on page 3 are answered, Antutive can prepare and submit its application. Sources: Website Positioning & Redesign Strategy (6 Aug), Final Gap Analysis (8 Aug), and the implemented website at www.antutive.com.

The one-minute summary

- 1. The old website was a risk.** It presented Antutive as a software agency — a category Google *explicitly excludes* — and carried claims we couldn't prove (3× faster, 24h SLA, GDPR badges). Under the program terms, false public information can void all credits.

2. The website has been rebuilt and is done. Antutive now reads as an AI-first product company, with Famant as its first flagship product and Data Delimited as its sister company. The independent gap analysis (8 Aug) confirms: **no Google website requirement is unmet — no further redesign is needed.**

3. Seven blockers remain — none of them website work. They are facts and decisions (funding, billing setup, MVP status, business model, the Gemini decision, services revenue, credit history). Answering them is **weeks of mostly administrative work, not months of rebuilding.** Then we apply.

What the program offers (why this matters)

Tier	Credits	Key entry conditions	Antutive today
Start	US\$2,000 (12 months)	Founded ≤ 24 months · working MVP · clear business model · intention to raise VC funding · no prior credits beyond free trial	Realistic near-term target — pending MVP & business-model confirmation
Scale	US\$200,000 (2 years)	Institutional/VC equity funding (SAFEs count; angel, friends-and-family, crowdfunding, grants do not) · founded ≤ 5 years · ≤ US\$5,000 prior credits	Blocked solely by the funding question
Scale + AI uplift	Up to US\$350,000 (2 years)	All Scale criteria + AI-first company + uses, or has a concrete plan to use, Gemini / Google's agent platform as the product's foundation	The goal to grow into — needs funding + the documented Gemini plan

All tiers exclude dev shops, consultancies and agencies. Tier assignment is Google's decision; applying consumes the application and activates the program terms — so we must choose the tier deliberately *before* submitting.

Before → After: how the website was repositioned

	Before (until 6 Aug)	Now (live)
What Antutive looks like	A build-for-hire development agency — 21 service signals vs 2 product signals	An AI-first product company that builds and operates its own products
Famant	One card + one buried block; no page, no navigation entry	First flagship product: own page, portfolio card, homepage spotlight, honest status labels
Services content	Two service pages, engagement models, client pricing tiers, "Discovery call" funnel	Removed entirely, with redirects — zero services language anywhere
Risky claims	"3× faster", "24h SLA", GDPR badges, "EU AI Act compliant", stale "launches Q3 2026", unconfirmed pricing	All removed. Nothing is published that we cannot prove
Legal pages	Dead footer text — no pages existed while personal data was collected	Working Privacy / Terms / Cookies pages (interim, marked pending legal review)
Structure & SEO	Identical metadata everywhere, no sitemap, unstyled error page, template URLs	Per-page metadata, sitemap, robots.txt, social image, designed 404, clean URLs
Data Delimited	Consulting-flavoured section sending AI visitors off-site	Sister-company ecosystem: "DD builds the intelligence, Antutive turns it into products"

What is already done and verified

- ✓ Live company website, 9 pages + designed 404 — all reviewed

✓ AI-first product-company positioning on every page

✓ Famant honestly labelled: first flagship, in development, pre-launch, waitlist open

✓ Multi-product portfolio structure (future products slot in with no rework)

✓ Company identity registry-verifiable on every page (ANTUTIVE AB · 559576-7228 · Gothenburg · founded 2026)
- ✓ Every risky claim removed; every capability carries a status label

✓ No Google/Gemini claims published before they are true (deliberate — protects us under the false-information clause)

✓ Data Delimited ecosystem presented without consulting language

✓ Working legal page structure, contact route, waitlist journey

✓ Unified premium design across all pages, desktop + mobile

Independent verdict (Final Gap Analysis, 8 Aug 2026): "The positioning transformation is complete and correct... No redesign is needed... The website has done its job and is no longer the constraint." Website readiness: **Mostly Ready**. Application readiness: held back only by the unanswered company-level facts below.

The 7 blockers — what we need from you

These are the only genuine blockers before applying. None can be solved by the website. Numbers 1–3 apply to **every** tier; 4–5 gate the Start tier; 6 gates the AI uplift; 7 protects eligibility itself.

#	Blocker	The question to answer	Why it matters	Owner
1	Funding position CRITICAL	Does Antutive have institutional/VC equity funding (incl. SAFEs)? If yes: round type, date, investor + public links . If no: a written note saying so.	Decides the route: US\$350k Scale-AI vs US\$2k Start. Everything else waits on this.	Founder
2	Google Cloud billing setup CRITICAL	Business Google account on an @antutive.com mailbox → Google Cloud billing account → record the 18-character billing ID → verify website = email = billing domains match.	Application prerequisite; credits approved only when all three domains match.	Engineering
3	Prior credit history CRITICAL	Has the company ever received Google Cloud credits or promotions, on any company account? Write the audit down.	Hard caps at both tiers. A wrong answer can void all credits with list-price clawback.	Founder + Eng
4	Working MVP CRITICAL — Start	Honestly: does a working Famant MVP exist today, capability by capability? If not, what's the shortest path to one?	An explicit Start-tier requirement — and Start is our realistic near-term target.	Founder + Product
5	Business model CRITICAL — Start	One page: how Famant makes money (tiers, target price, assumptions). Do the old 0 / 79–129 SEK prices stand? Plus a recorded VC-funding intention (a Start criterion).	An explicit Start-tier requirement. It does not need to be published — only documented.	Founder
6	Gemini / Google Cloud decision CRITICAL — AI uplift	Will Famant be built on Gemini and Google's agent platform / Google Cloud? If yes, engineering documents which models power which capability and how the assistant is orchestrated and evaluated. A written plan is enough for Google.	The named qualifying criterion of the AI uplift (up to US\$350k). The Technology page has a slot ready for it.	Founder + Eng
7	Services revenue HIGH	Written confirmation that ANTUTIVE AB earns no services/consulting revenue — or a decision on winding down / separating what exists. (Data Delimited's consulting stays separate.)	Google outright excludes agencies. The commercial reality must match the clean website.	Founder

Also needed — important, but not blocking

Item	What we need	Owner	Priority
Human profiles on the site	The site currently names no person at all. We need at least one real, named human on the About page — the founder, the founder with team members, or at least one team member: name, role, short factual bio, photo, LinkedIn. Real people only, published with their consent. The gap analysis calls this "the best-value single addition" for a reviewer verifying a 2026 company.	Founder + Team	HIGH
Authorised signatory	Who has authority to accept the program terms (incl. confidentiality and investor-disclosure clauses) for ANTUTIVE AB? That person submits the application.	Founder	HIGH
Legal review	A qualified adviser reviews the Privacy / Terms / Cookies pages so the "interim" label can be removed; separate privacy advice on household/children's data before any Famant beta.	Founder + Legal	HIGH
Certificate of incorporation	On file, confirming the exact legal name and 2026 registration date (age evidence if Google asks).	Founder	MEDIUM
Product proof	When real screens exist: screenshots + one recorded end-to-end AI demo (photograph an invitation → confirm the proposed event). The single strongest AI-first evidence available; the website has slots ready.	Product	HIGH
Architecture doc + spend forecast	After decision #6: a one-page architecture/data-flow doc and a 6/12-month cloud-spend forecast — the substance of any follow-up conversation with Google.	Engineering	HIGH
famant.com alignment	famant.com must say the same things as antutive.com (product name, description, status, pricing) once decisions #4–5 are made.	Product	MEDIUM

A short technical punch-list stays with the web team (manifest text, canonical URLs, minor mobile/contrast fixes, prerendering). None of it blocks the application.

The path to applying

Two cautions from the program terms: (1) submitting consumes the application and activates the agreement — so the tier decision must come first; (2) credits are not retroactive — avoid significant paid Google Cloud usage before credits are issued, and don't casually redeem promo credits when creating the account (it counts against the caps).

Bottom line: the website is ready and working for us. If you answer blockers 1–7 — roughly one decision session plus a few days of account setup — Antutive can submit a credible application. On today's evidence the realistic route is the **Start tier (US\$2,000)** now, with the **Scale + AI uplift (up to US\$350,000)** unlocked the moment a qualifying funding round exists and the Gemini plan is on paper.
