

Antutive Google for Startups Cloud AI Program

Final Website & Application Readiness Gap Analysis

Prepared for	Antutive (ANTUTIVE AB) — Famant
Analysis date	8 August 2026
Document type	Final gap analysis: Google program expectations vs. current (redesigned) Antutive website
Source Document 1	Google for Startups Cloud AI Program — Complete Analysis and Application Readiness Guide, Rev. 2, 28 July 2026 (official Google pages verified 28 July 2026)
Source Document 2	Antutive Current Website Analysis — Updated Website, 7 August 2026 (audit of the redesigned www.antutive.com)
Scope note	Document 2 was supplied as text covering its Executive Summary in full and Sections 2–6 in part. Findings about pages not detailed in the supplied portion rely on Document 2's Executive Summary and page inventory; anything not covered there is marked NOT VERIFIED. The earlier audit of the pre-redesign website (6 August 2026) is excluded from evaluation per instructions and is referenced only once, where an explicitly documented legacy fact is relevant.
Status key	OFFICIAL GOOGLE REQUIREMENT OFFICIAL CONDITION / LIMITATION RESEARCH RECOMMENDATION CURRENT WEBSITE EVIDENCE REMAINING GAP STRATEGIC RECOMMENDATION
Validity note	Google states acceptance is discretionary and terms may change at any time. All Google figures herein were read from official pages on 28 July 2026 (per Document 1) and must be re-verified on the day of application.

1. Executive Summary

Where Antutive stands today. The redesigned website at www.antutive.com now presents Antutive as exactly the kind of company the Google for Startups Cloud Program is built for: a verifiably incorporated Swedish limited company (ANTUTIVE AB, org.nr 559576-7228, Gothenburg, founded 2026) that positions itself as an AI-first product company, with Famant honestly labelled as its first flagship product, in development and pre-launch, inside a portfolio architecture visibly prepared for future products, and with Data Delimited presented as a sister company. The site is not an agency site, not a consultancy site, and does not collapse the company into a single product. **CURRENT WEBSITE EVIDENCE**

How closely the website aligns with Google's expectations. Google publishes only three website-related hard requirements: a publicly available company website; a business email on the same domain; and a Google Cloud billing account whose associated email domain matches both. The first is satisfied. The second is satisfied at website level (contact@antutive.com is published on the site) but the application-side email usage is not yet verified. The third is entirely outside the website and is NOT VERIFIED. Beyond those three, everything Google-related that the website can influence — AI-first positioning, product-company framing, honest status labels, absence of services language, absence of false claims, legal pages, verifiable identity — is already present.

OFFICIAL GOOGLE REQUIREMENT **CURRENT WEBSITE EVIDENCE**

What has already been solved. The classification risk that dominated the original research (being read as a dev shop, consultancy or agency — an express Google exclusion) has been eliminated at website level. The integrity risk (unverified claims voiding incentives under the programme terms) has been eliminated by an unusually disciplined claim posture: every capability carries an "In development" chip, empty product slots say "announced when real", and the site explicitly declines to name a cloud provider or model until confirmed. Company identity, legal pages, portfolio structure, multi-product architecture and design coherence are all done.

What remains missing. Three clusters. (1) *Company-level eligibility facts Google actually gates on* — funding position (which alone decides whether the US\$350,000 Scale-AI route exists or the US\$2,000 Start tier is the target), prior Google Cloud credit history, Google Cloud account and 18-character billing ID, domain-aligned billing email, and for the Start tier a working MVP, a clear business model and an intention to raise venture funding. None of these can be fixed by the website. (2) *The Google AI stack commitment* — the site names no cloud, no model and no Gemini anywhere; Google's AI uplift requires use of, or a concrete plan to use, Gemini or the Gemini Enterprise Agent Platform. This is first a company/engineering decision, and only afterwards a small Technology-page content update. (3) *Evidence* — no named founder or team, no screenshots, no demo, no traction. None of this is required by Google, but it is the material a case-by-case AI-first review would lean on.

Is another redesign required? No. The current structure, information architecture, positioning and design system are correct and should be preserved. What remains on the website is content addition (founder identity; later, the confirmed AI/cloud architecture; later still, real product evidence) plus a short technical punch-list (stale agency-era webmanifest copy, apex-vs-www canonical/OG/sitemap mismatch, 404 returning HTTP 200, mobile text truncation, contrast defects, the non-decoding Famant hero video). None of these is structural. **STRATEGIC RECOMMENDATION**

- **Biggest website-level blocker:** none, in the strict sense — no stated Google website requirement is unmet. The biggest website-level *weakness* is the total absence of named people (founder/team), followed by the absence of any named AI/cloud architecture on the Technology page (currently a deliberate, honest placeholder).
- **Biggest company-level blocker:** the unverified funding position, which determines the target tier; immediately behind it, the unbuilt/unverified Google Cloud billing alignment (account, 18-character ID, domain-matched email) which Google states is required for credits to be approved at any tier.
- **Biggest technical/product blocker:** no demonstrated working product (no MVP evidence, no screenshots, no demo) and no Gemini/Google Cloud implementation or documented plan. The Start tier explicitly requires a working MVP; the AI uplift explicitly requires the Gemini foundation (current or planned).
- **Recommended next step:** run Phase 0 (Section 23) — a founder fact-finding pass that answers the funding, credits, MVP, business-model and services-revenue questions in writing — before touching the application form or investing in further website work.

Overall Website Readiness: Mostly Ready. All three official website-related requirements that the website itself can satisfy are met or met-pending-verification; positioning fully supports the application; remaining items are evidence additions and technical polish, not requirements.

Overall Company/Application Readiness: Cannot Determine (leaning Partially Ready). Incorporation, age and identity are confirmed and strong. But every remaining fact Google actually gates on — funding, prior credits, billing alignment, MVP status, business model — is NOT VERIFIED in the source documents. These are verification tasks, not necessarily deficiencies.

Website Redesign Decision: No redesign. Structure and positioning are already sufficient. Only content, evidence and technical fixes remain (Sections 10, 15, 16).

Recommended Application Decision: Verify eligibility first. Do not apply yet: submission consumes the application and brings the programme agreement into effect, and the tier choice cannot yet be made rationally because the funding position is unknown. After Phase 0, the likely realistic route on current evidence is the Start tier (US\$2,000), with the Scale + AI uplift (up to US\$350,000) pursued if and when qualifying institutional funding exists.

2. Google Program Tier Analysis

Tiers as published on the official pages reviewed in Document 1 (verified 28 July 2026). Tier assignment is decided by Google, not the applicant.

OFFICIAL CONDITION

Tier	Main eligibility	Funding requirement	Credit benefit	Antutive current status	Missing requirement	Likely fit
Start tier (pre-funded)	Founded ≤ 24 months; digital-native; working MVP ; clear business model; intention to seek venture funding soon; no Google Cloud credits beyond the free trial; excludes service agencies, consultancies, traditional small businesses	Not funded with qualifying startup equity	US\$2,000, valid 12 months; free-tier AI Studio access	Age: founded 2026 → inside 24 months (satisfied, subject to certificate). Product-company positioning: satisfied. Famant: explicitly pre-launch, "in development" — a <i>working MVP</i> is NOT VERIFIED. Business model: no pricing or monetisation anywhere on the site — NOT VERIFIED. Prior credits: NOT VERIFIED. VC intention: NOT VERIFIED.	Written confirmation of working MVP; documented business model; prior-credit audit; VC-intention statement	Possible fit — the realistic first target on current evidence
Scale tier (standard)	Founded ≤ 5 years; institutional/VC equity funding (pre-seed/seed ≤ 5 years or Series A ≤ 12 months; SAFEs eligible); ≤ US\$5,000 prior Google Cloud credits; funding verifiable via public links; excluded categories apply	Institutional investor or VC firm. Angel, friends-and-family, crowdfunding, prize, private-equity and government-grant funding do not qualify	US\$200,000 over 2 years (Y1 100% up to US\$100k; Y2 20% up to US\$100k) + support, Workspace, Maps, Skills benefits	Age: satisfied. No funding of any kind is claimed on the website (deliberately) and none is confirmed in either document.	Qualifying institutional equity round with public verification links	Unverified — does not currently qualify on available evidence; blocked solely by the funding question
Scale tier + AI startup programme	All Scale criteria, plus AI-first (AI foundational to structure and strategy, not bolt-on), plus use of — or a plan to use — Gemini or the Gemini Enterprise Agent Platform as a foundation of the primary product; assessed case by case	Same as Scale	Up to US\$350,000 over 2 years (Y1 100% up to US\$250k; Y2 20% up to US\$100k) + AI experts, webinars, roadmap insight, DeepMind model access	AI-first positioning: strongly present on the website. Gemini/agent-platform usage or plan: absent — the site names no cloud or model anywhere, by deliberate policy. Funding: as above.	Qualifying funding; a documented Gemini / Gemini Enterprise Agent Platform commitment	Does not currently qualify — the target to grow into once a qualifying round closes (subject to the 5-year age and US\$5,000 credit limits still holding)
Series B+	Later-stage; negotiated via sales	Series B or later	Custom, spend-based; not published	Not applicable at Antutive's stage (founded 2026, pre-launch product)	—	Does not currently qualify

Which tier to evaluate first. The Start tier. Every Scale/AI advantage is gated behind institutional funding that is not confirmed anywhere; the Start tier's open questions (MVP, business model, credit history, VC intention) are all answerable by the founder this week. Note two cautions from Document 1: (a) applying consumes the application and activates the programme agreement, so the tier decision must precede submission; (b) accepting Start-tier credits counts toward the prior-credit position relevant to any later Scale/AI application — the US\$2,000 sits under the US\$5,000 Scale cap, but the one-promotional-code rule and prior-participation routing mean a later Scale application should be discussed with Google startup support (cloudstartupsupport@google.com) first.

OFFICIAL CONDITION STRATEGIC RECOMMENDATION

Documented inconsistency (from Document 1 §9): Google's Scale/AI pages state "founded within 5 years"; startup.google.com/cloud states "within 5 years, or 10 for Scale". Irrelevant to Antutive today (founded 2026), but the 5-year assumption should govern any future planning.

3. Complete Google Requirement Mapping — Master Gap Matrix

Classification: **REQ** Official Google requirement · **COND** Official condition/limitation · **REC** Research-document recommendation. Status: **Satisfied** · **Partially satisfied** · **Missing** · **Not verified** · Not applicable · **External blocker**. Level: W = website, C = company/application.

#	Google requirement / expectation	Class	Current Antutive evidence	Status	Missing item	Level	Priority
1	Publicly available company website	REQ	Live at https://www.antutive.com/ , 9 real routes, all reviewed	Satisfied	—	W	CRITICAL (done)
2	Business email on the website domain, used in the application	REQ	contact@antutive.com published on Contact and Cookies pages	Partially satisfied	Confirmation that a company-domain mailbox is the working application email and the Google-account email	C	CRITICAL
3	Billing-account email domain matches website + business email (required for credit approval)	REQ	None — no billing information in either document	Not verified	Google Cloud account created with company-domain email; alignment check	C	CRITICAL
4	18-character Google Cloud billing account ID ready at application	REQ	None	Not verified	Billing account and recorded ID	C	CRITICAL
5	Apply signed in with the business (company-domain) Google account	REQ	None	Not verified	Business Google account	C	CRITICAL
6	Company age ≤ 5 years (Scale/AI)	REQ	"Founded 2026" stated site-wide with org.nr 559576-7228	Satisfied	Certificate of incorporation on file for evidence if queried	C	LOW
7	Company age ≤ 24 months (Start)	REQ	Founded 2026 → well inside 24 months	Satisfied	Same as #6	C	LOW
8	Legal entity able to contract; exact legal name; authority to bind	REQ	ANTUTIVE AB, Swedish Aktiebolag, share capital 25,000 SEK, registered seat Gothenburg, VAT-registered — published and registry-verifiable	Partially satisfied	Named authorised signatory for the programme terms	C	HIGH
9	Institutional/VC equity funding for Scale & AI (pre-seed/seed ≤ 5 y or Series A ≤ 12 m; SAFEs eligible)	REQ	No funding stated anywhere (deliberate claim hygiene)	External blocker	Factual determination of the funding position	C	CRITICAL
10	Funding verifiable via publicly available online sources (or investor verification if stealth)	REQ	None	Not verified	Public links, if a qualifying round exists	C	CRITICAL (Scale only)
11	Prior Google Cloud credits ≤ US\$5,000 (Scale/AI); none beyond free trial (Start)	REQ	None	Not verified	Written audit of all credits ever received on company accounts	C	CRITICAL
12	Not a dev shop, consultancy or agency (all tiers); not a service agency / traditional small business (Start)	COND	Website: explicitly anti-agency ("Built and operated, not handed over"; "Products, not projects"); no services offered anywhere	Partially satisfied	Founder confirmation that the company earns no services/consulting revenue (the pre-redesign site marketed fixed-scope client builds as recently as 6 Aug 2026, so the commercial position needs explicit confirmation, not just new copy)	C	HIGH
13	Not in other excluded categories (education, government, nonprofit, listed/acquired, personal content, crypto mining, token distribution)	COND	Private Swedish AB building consumer software; nothing on the site suggests any excluded category	Satisfied	One-line internal confirmation	C	LOW

14	AI-first: AI foundational to company structure and strategy, not a bolt-on (AI uplift; case-by-case)	REQ	"AI-FIRST PRODUCT COMPANY" eyebrow; falsifiable test ("remove the intelligence and there is no product"); mechanism-first capability descriptions; company-wide AI method section	Partially satisfied	Positioning is done; technical substantiation (named models, architecture) is absent	W+C	HIGH
15	Use of, or plan to use, Gemini or the Gemini Enterprise Agent Platform as foundation of the primary product (AI uplift)	REQ	None — the site names no cloud provider or model vendor anywhere, explicitly "until confirmed"	Missing	A company decision to build on Gemini/GEAP; then a documented plan (application) and Technology-page update (website)	C→W	CRITICAL (AI uplift only)
16	Working MVP (Start tier)	REQ	Famant labelled "in development", pre-launch; no screenshots, no demo	Not verified	Internal confirmation of a working MVP; ideally public evidence	C	CRITICAL (Start)
17	Clear business model (Start tier)	REQ	No pricing, no monetisation model anywhere on the site	Not verified	Documented business model (publication optional)	C	CRITICAL (Start)
18	Intention to seek venture funding soon (Start tier)	REQ	None	Not verified	Founder statement	C	HIGH (Start)
19	Country of primary business acceptable (discretionary; no published list)	COND	Sweden (Gothenburg), stated consistently	Partially satisfied	Nothing suggests risk; residual discretion is Google's	C	LOW
20	Application step-one fields (name, role, title, phone, industry, country)	REQ	Not covered by either document	Not verified	Prepared answers	C	MEDIUM
21	Declare startup type = AI startup on the form	REQ	—	Not applicable yet	Do at submission	C	MEDIUM
22	No false information (voids incentives; list-price clawback)	COND	Exemplary: status chips on every capability, "announced when real" slots, no user/funding/partner claims, screenshots/demo promised only "when real"	Satisfied	Maintain the posture	W	CRITICAL (done)
23	Accurate product status labels	REC (integrity-supporting)	"In development" chip on every Famant capability; pre-launch stated site-wide	Satisfied	—	W	CRITICAL (done)
24	No placeholder content	REC	No dummy text; "Open slot" cards are deliberate design, clearly labelled. Exception: site.webmanifest still carries obsolete agency-era copy	Partially satisfied	Rewrite the webmanifest description	W	HIGH
25	Privacy Policy, Terms, cookie handling (legal obligation independent of Google; credibility)	REC	/privacy, /terms, /cookies all live, working, honest ("interim" GDPR-oriented notices); cookies page correctly discloses the single session-storage flag	Partially satisfied	Review by a qualified adviser; remove "interim" status; effective dates	W+C	HIGH
26	Company and contact information for identity verification and follow-up	REC	Legal name, org.nr, legal form, share capital, seat, founding year, VAT/invoicing on the site; contact page + mailto; registration strip on homepage	Satisfied	—	W	MEDIUM (done)
27	AI capabilities listed with status labels	REC	Four Famant capability rows with one-line mechanisms + status chips; 4-step Input→Understanding→Proposal→Confirmation flow	Satisfied	—	W	HIGH (done)
28	Technology page naming Gemini model roles	REC (supports #15)	Technology page exists with AI philosophy, principles, worked example, claim policy — but deliberately no vendor names; architecture is an explicit placeholder	Missing	Named Gemini/GEAP roles, once the company commits (see #15)	C→W	HIGH
29	Google Cloud architecture description (services, environments)	REC	None; site states cloud architecture "being finalised, published once confirmed"	Missing	Architecture doc (company) → summary on Technology page (website)	C→W	MEDIUM
30	Product screenshots (real screens only)	REC	Zero product imagery site-wide; explicitly promised "when real"	Missing	Real screens from a working build	C→W	HIGH
31	Demo video of one genuine end-to-end AI flow	REC	None; promised "when real"	Missing	Recorded real flow	C→W	HIGH

32	Waitlist / beta call to action	REC	Waitlist open, hosted at famant.com/en, disclosed as off-site; anchor target verified	Satisfied	—	W	MEDIUM (done)
33	Founder profiles with external corroboration	REC	No named person anywhere on the site; About has a team placeholder	Missing	Founder name(s), role, short factual bio, LinkedIn	W (+founder consent)	HIGH
34	Team profiles (real members only)	REC	None	Missing	Only if real people consent; never intended hires	W	MEDIUM
35	Responsible-AI / AI data-processing transparency (family product; possible minors' data)	REC	Famant page carries a privacy stance; human-confirmation pattern ("Proposal → Confirmation") is described; no dedicated responsible-AI or model-data-flow disclosure	Partially satisfied	Model-data-flow disclosure once the stack is confirmed; qualified privacy advice before any beta	W+C	MEDIUM (rises to HIGH before beta)
36	Mobile responsiveness	REC	Reviewed at 390/700/820/1440 px; works, but Famant capability sub-lines truncate unreadably at 390 px; hero graphic and floating pills hidden on mobile (acceptable)	Partially satisfied	Fix truncation; contrast defects	W	MEDIUM
37	Working links / no dead ends	REC	No dead internal links; sitemap and router agree exactly; designed 404	Satisfied	—	W	MEDIUM (done)
38	Consistent branding and one canonical set of company facts	REC	One name, one design system, same registry facts repeated on every route; exceptions: stale manifest, apex-vs-www canonical inconsistency	Partially satisfied	Manifest + canonical host alignment	W	HIGH
39	Technical architecture document (for follow-up conversations)	REC	None evidenced	Missing	One-page architecture + data-flow doc	C	HIGH
40	Cloud-spend forecast with stated assumptions	REC	None evidenced	Missing	6/12-month forecast per Document 1 §22	C	HIGH
41	Business-model documentation (REC outside Start tier)	REC	None; site publishes no pricing (honest — pricing not decided)	Missing	Internal one-pager; publish only when confirmed	C	HIGH

4. What Antutive Already Satisfies

Everything below is supported by Document 2 evidence. These items should be treated as **done** and protected from further churn.

- **Public website** — live, complete, coherent, 9 routes + designed 404, all functional. **REQ met**
- **Domain identity** — one company domain (antutive.com) carrying the site and the published contact mailbox (contact@antutive.com).
- **Company identity** — legal name, org number, legal form, share capital, registered seat, founding year, VAT/invoicing currencies published and registry-verifiable; repeated in the footer of all 10 routes and in Organization JSON-LD.
- **Product-first positioning** — "invents, builds and operates its own software products"; explicit anti-agency statements; zero services offered anywhere on the site.
- **AI-first positioning** — header eyebrow, falsifiable AI-dependency test, mechanism-first capability language, company-level "How we build" AI method section.
- **Multi-product architecture** — Products portfolio page with Current/Future bands, empty "announced when real" slots, product admission criteria, product-constellation diagram; navigation says "Products" (plural).
- **Famant positioning** — consistently "first flagship product of Antutive", in development, pre-launch, waitlist open; ownership by ANTUTIVE AB stated.
- **Honest status labels** — "In development" chips on every capability; the exact practice Document 1 recommends and the programme's false-information clause rewards.
- **Claim hygiene** — no user counts, no funding claims, no partners, no testimonials, no invented metrics, no fabricated screenshots; deliberate absence is labelled as absence.
- **Data Delimited relationship** — presented as sister-company ecosystem with explicit division of labour; kept out of primary navigation so it cannot be read as Antutive's own consulting offer.
- **Legal pages** — working /privacy, /terms, /cookies routes with honest interim GDPR-oriented content; cookie disclosure matches actual behaviour (single session-storage flag).
- **Navigation & information architecture** — four items + one CTA; portfolio-ready footer; dense, dead-link-free internal linking.
- **Design quality** — one coherent design system (Sora/Inter, #46589F palette) across every route; signature diagrams on inner pages; "a genuinely unified site, not a strong homepage bolted to weak subpages" (Document 2).
- **Company age** — founded 2026: inside both the 24-month Start window and the 5-year Scale window.
- **Country identity** — Sweden/Gothenburg stated consistently (final acceptance remains Google's discretion).

5. Website Positioning Review

Reads as...	Verdict	Evidence (Document 2)
Product company	Yes	Company defined by inventing/building/operating its own products; portfolio page; "Products, not projects"
AI-first company	Yes	Eyebrow positioning; structural (not decorative) AI framing; falsifiable dependency test; mechanism descriptions with statuses
Multi-product company	Yes	Portfolio with Current/Future bands; admission-criteria bar; homepage "Room for more" card doing narrative work
Technology company	Yes	Dedicated Technology page with principles, worked example and claim policy
Startup	Yes	Founded 2026, pre-launch flagship, honesty-forward early-stage posture
Agency / consulting / outsourcing / custom-software company	No	Zero services offered; explicit "built and operated, not handed over"; no engagement models, no client language anywhere. Residue: only the machine-readable site.webmanifest still carries agency-era copy — fix it (Section 15)
Single-product "Famant company"	No	Antutive owns logo, domain, nav, footer, copyright, schema; Famant demoted to a sub-line in the hero; company-level sections dominate the homepage

Final verdict: the positioning transformation is complete and correct. The website now affirmatively supports the classification Google requires (product company) and the classification the AI uplift requires (AI-first), and no longer exhibits the excluded-category profile. **CURRENT WEBSITE EVIDENCE**

6. Famant Balance Review

- **Is Famant too dominant?** No. It is a sub-line in the hero, one card in the portfolio section, one spotlight section, and the header CTA. Company-level content dominates every page.
- **Is Famant too weak?** No. A Google reviewer assessing "is AI foundational to the primary product?" finds a full product page, capability mechanisms, a worked end-to-end flow, and a waitlist — all clearly owned by ANTUTIVE AB.
- **Structural note (acceptable):** Famant lives at top-level /famant rather than /products/famant, and holds the header's primary button. Document 2 itself calls this "a promotion beyond 'one of several', though defensible while there is only one product." Agreed — do not change it now; revisit only when Product 2 becomes real.
- **Does Antutive remain the master brand?** Yes — logo, domain, navigation, footer, copyright and Organization schema are all Antutive's; Famant is a destination inside it.
- **Can future products fit naturally?** Yes — a new product drops into the existing Current band and footer column with no navigation change.

Famant balance status: Correct balance. No adjustment required for the application.

7. Multi-Product Readiness Review

Question: could Antutive add Product 2 and Product 3 without another repositioning?

Surface	Ready?	Evidence
Homepage	Yes	Portfolio section already splits into Famant card + "Room for more" card; a second product replaces the empty card without layout change
Products page	Yes	Current band with counter ("1 product · pre-launch"), Future band with two labelled open slots, product admission criteria
Navigation	Yes	"Products" (plural) routes to the portfolio, not to Famant; no structural change needed
Technology page	Yes	Company-level AI philosophy that "borrows Famant as an example of an Antutive-wide pattern" — a second product slots in as a second worked example
About page	Yes	Company-identity page, not a Famant page (per inventory/exec summary)
Footer	Yes	PRODUCTS column ("All products / Famant / waitlist") extends by one line per product
Company mission	Yes	Mission framed around products (plural) that carry real work
Metadata	Mostly	Per-route titles/descriptions exist but are injected client-side and the raw HTML ships homepage metadata for every route; a new product page inherits this limitation (Section 15)
Header CTA	Watch item	"Meet Famant" as the single header CTA is right today; with 2+ products it should generalise — a future decision, not a current defect

Multi-Product Readiness Score: 9/10. The architecture is genuinely portfolio-shaped in the UI, not just in copy. One point withheld for the client-side metadata limitation and the single-product header CTA, neither of which requires action before applying.

8. AI-First Readiness Review

Google's test (Document 1): AI must be part of the company's foundational structure and strategy, not a bolt-on; the product must be built — or planned to be built — on Gemini or the Gemini Enterprise Agent Platform; assessment is case-by-case from available material.

Positioning evidence (strong)

- "AI-FIRST PRODUCT COMPANY · GOTHENBURG" above the fold; AI framed as structural, not decorative.
- The falsifiable test — "if you removed the intelligence there would be no product" — is precisely the "remove the AI and nothing is left" argument Document 1 recommends (§21) as the strongest AI-first framing.
- Company-wide method: "every Antutive product is model-driven behaviour with a human in the loop."

Product evidence (present but thin)

- Four Famant capabilities described as mechanisms with benefits and status chips (family-aware scheduling, task creation & delegation, document understanding, meal & household planning).
- One end-to-end flow (photograph a birthday invitation → Understanding → Proposal → Confirmation) — exactly the "one concrete AI behaviour end to end" Document 1 §14 recommends, minus the named model and minus any recorded proof.
- No screenshots, no demo, no beta, no measured behaviour — deliberately and honestly absent.

Technical evidence (absent)

- No model named. No cloud named. No architecture published. The Technology page explicitly declines to name a vendor "until confirmed" and holds an architecture placeholder.
- Consequence for Google: the AI-first *claim* is well made; the Gemini-foundation *criterion* — the specific named requirement of the AI uplift — currently has zero public or documented support. Google accepts a plan (not only current usage), but a plan must exist and be articulable.

Missing evidence

1. A committed, documented AI stack decision (Gemini / Gemini Enterprise Agent Platform / Google Cloud services) — company decision first. **REMAINING GAP**
2. Technology-page update naming model roles per capability once committed. **RESEARCH RECOMMENDATION**
3. One recorded genuine AI flow (the invitation flow already scripted on the homepage is the obvious candidate). **RESEARCH RECOMMENDATION**
4. Real screenshots when real screens exist. **RESEARCH RECOMMENDATION**

Important nuance: the website's vendor-neutral honesty is not a defect to "fix" by copywriting. Writing "built on Gemini" before the decision is real would violate the site's own claim policy and the programme's false-information clause. The sequence must be: decide → document → publish.

9. Google Cloud / Gemini Readiness

Nothing in either source document evidences any Google Cloud or Gemini usage, account, or plan. Every row below is therefore honest rather than pessimistic.

Requirement	Current status	Evidence	Missing action	Owner	Blocks application?
Google Cloud currently used	NOT VERIFIED	No cloud named on the site (deliberate); no internal evidence supplied	Founder/engineering statement of current hosting & stack	Engineering	No (plan can suffice for AI uplift)
Gemini currently used	NOT VERIFIED	No model named anywhere	Statement of current model usage, if any	Engineering	No
Gemini / GEAP planned as product foundation	NOT VERIFIED	Site says architecture is "being finalised"	The commitment decision + written plan (model roles per capability)	Founder + Engineering	Yes — for the AI uplift (not for Start tier)
Architecture evidence	Missing	Explicit placeholder on Technology page	One-page architecture & data-flow document (Document 1 §18 Phase 5)	Engineering	No (recommended)
Google Cloud account (business)	NOT VERIFIED	None	Create with company-domain email	Engineering	Yes — required to apply
Billing account + 18-character ID	NOT VERIFIED	None	Create; record ID from console	Engineering	Yes — required to apply
Billing email domain-aligned with antutive.com	NOT VERIFIED	None	Create billing account from the company-domain email; verify all three domains match	Engineering	Yes — Google states credits are not approved otherwise
Company-domain email correct/working	Partially verified	contact@antutive.com published on the site	Confirm mailbox works and decide the applicant mailbox	Founder	Yes if absent

Google Cloud organisation / project structure	NOT VERIFIED	None	Dev/staging/prod projects under one billing account (recommended)	Engineering	No
Gemini usage technically verified	NOT VERIFIED	None	Working integration or documented plan	Engineering	No (plan suffices)
Any Google Cloud claim safe to publish today?	No	Nothing is implemented or confirmed	Publish only after the commitment is real ("Implement first" in Section 17)	Founder	— (publishing early would create risk, not remove it)

Also note from Document 1 §7: credits are not retroactive — avoid running significant paid Google Cloud workloads before credits are issued; and prior-credit caps apply (US\$5,000 Scale / free-trial-only Start), so the account-creation step should not casually redeem promotional credits.

10. Website-Level Missing Items

Only items that should actually change *on the website*. None is an official Google requirement; each is justified below.

Item	Current state	Missing element	Why it matters	Basis	Page	Required change	Priority	Application impact
Founder identity	No named person anywhere; About has a team placeholder	Founder name, role, short factual bio, LinkedIn link	A case-by-case reviewer verifying a 2026-founded company finds strong registry data but zero humans; external corroboration is the cheapest large credibility gain available	REC (Doc 1 §12.3, §19.3 "unverifiable founders")	/about	Fill the existing team placeholder — content addition, no redesign	HIGH	Improves credibility; not gating
site.webmanifest copy	Still carries obsolete agency-era description	Product-company description matching current positioning	The one surviving machine-readable artefact of the excluded services identity; trivially fixable	REC supporting the agency exclusion COND	site.webmanifest	Rewrite name/description fields	HIGH	Removes residual classification signal
Canonical host consistency	Canonical/OG/sitemap URLs point to apex while the site serves and redirects to www	One canonical host used everywhere	Identity-consistency hygiene (Doc 1 §19.3: inconsistent company information invites manual review); also basic SEO correctness	REC	All routes + sitemap.xml	Standardise on https://www.antutive.com across canonicals, OG, sitemap	HIGH	Hygiene; not gating
Technology page architecture section	Honest placeholder: no vendor, no model named "until confirmed"	Named Gemini/GEAP/Google Cloud roles	Concentrates the AI-uplift evidence where a reviewer will look	REC supporting REQ #15	/technology	Only after the company commits to the stack (Section 24) — then a content update within the existing page structure	HIGH (dependent)	Materially strengthens the AI-uplift case
Product evidence	Zero screenshots/demo, promised "when real"	Real screens + one recorded end-to-end flow	"The fastest way for a reviewer to see the product is real and AI-centred" (Doc 1 §11.2)	REC	/famant (+ homepage spotlight)	Publish only when a working build exists — dependency on engineering, not on web work	HIGH (dependent)	Strongest available AI-first evidence
Mobile truncation	At 390 px, Famant capability sub-lines ellipsized ("One shared calendar view the f...")	Readable benefit lines on phones	The AI-capability evidence is unreadable on the most common device class	REC (mobile responsiveness)	Homepage §5.4 (and any shared component)	CSS fix: wrap instead of truncate	MEDIUM	Minor credibility
404 HTTP status	Designed 404 page returns HTTP 200	Correct status (or prerender/host-level 404)	Technical correctness; crawler hygiene	REC	Catch-all route	Host-level or prerender fix	LOW	None on eligibility

Famant hero video	Did not decode in the audit browser (readyState 0, file valid)	Reliable playback or graceful poster fallback	A broken-looking hero on the flagship product page is the kind of defect a reviewer notices	REC	/famant	Diagnose codec/autoplay; add poster fallback	MEDIUM	Minor credibility
Legal pages status	Present but explicitly "interim"	Reviewed, dated, non-interim versions	Doc 1 treats working Privacy/Terms as essential-before-applying (§12.2 item 7); GDPR obligations are independent of Google and heightened for a family product	REC + likely legal obligation	/privacy, /terms, /cookies	Qualified legal review, then update in place	HIGH	Credibility + legal exposure
Contrast defects	"A handful of contrast ... defects" (Doc 2 §1)	WCAG-reasonable contrast	Accessibility polish	REC	Various	Token-level colour fixes	LOW	None
Intro overlay skip control	Full-screen brand intro, once per session; no visible skip found	Skip affordance / reduced-motion respect	First-visit UX; accessibility	REC	Homepage overlay	Add skip + prefers-reduced-motion handling	LOW	None

11. Company-Level Missing Items

None of these can be solved by the website, and no website work should be attempted as a substitute.

Missing item	Why required	Current evidence	Required action	Owner	Priority	Application impact
Funding position determined	REQ — decides Scale/AI vs Start; institutional/VC equity only for Scale	None; nothing claimed anywhere	Written yes/no with round type, date, investor and public links — or a documented decision that no qualifying funding exists	Founder	CRITICAL	Determines the entire application route
Prior Google Cloud credit audit	REQ — ≤US\$5,000 (Scale/AI); free-trial only (Start)	None	Audit every company Google Cloud account/promotion ever used; write it down	Founder + Engineering	CRITICAL	Hard cap at both tiers; false disclosure voids incentives
Google Cloud account + billing ID + domain alignment	REQ — 18-char ID at application; domains must match for credit approval	None	Create business Google account on antutive.com; create billing account; record ID; verify website=email=billing domains	Engineering	CRITICAL	Application prerequisite
Working-MVP confirmation	REQ (Start tier)	Famant "in development", pre-launch; no evidence of a working build	Honest internal assessment: does a working MVP exist today? If not, either build to MVP before applying to Start, or accept the risk of the reviewer's judgement	Founder + Product	CRITICAL (Start)	Start-tier criterion
Business model documented	REQ (Start tier); REC otherwise	No pricing/monetisation anywhere	One-page model (tiers, target price, unit assumptions); publish only when confirmed	Founder	CRITICAL (Start)	Start-tier criterion
Services-revenue confirmation	COND — agencies/consultancies/dev shops excluded	Website is clean; the commercial reality behind the recent services-era positioning is unconfirmed	Founder confirms in writing that ANTUTIVE AB earns no services/consulting revenue (or discloses and resolves what exists)	Founder	HIGH	Misclassification = outright exclusion
Gemini / Google Cloud commitment	REQ for AI uplift ("use or plan to use")	None; site deliberately vendor-neutral	Decide the stack; document model roles per capability and the GEAP/Vertex naming that matches the real plan (re-verify naming on application day)	Founder + Engineering	CRITICAL (AI uplift)	Without it the AI uplift has no basis
Architecture document	REC	None	One page: services, environments, data flows, region/residency	Engineering	HIGH	Substance of any follow-up conversation
Cloud-spend forecast	REC	None	6/12-month model with stated assumptions; year-2 at 20% coverage modelled	Engineering + Founder	HIGH	Credit management; onboarding conversations
Incorporation certificate on file	REC evidencing REQ (age)	Registry facts published; certificate not evidenced	Obtain and file	Founder	MEDIUM	Evidence if queried
Authorised signatory	COND — terms bind on submission	None named	Name the person with authority to bind ANTUTIVE AB; they submit	Founder	HIGH	Submission validity
Privacy advice (household/minors' data)	REC + likely legal obligation	Interim notices only	Qualified advice before any public beta	Founder + Legal	HIGH (pre-beta)	Compliance risk, not Google eligibility
VC-intention statement	REQ (Start: "intention to seek venture funding soon")	None	Founder decision, recorded	Founder	HIGH (Start)	Start-tier criterion

12. Product Evidence Gap

Famant's evidence position on antutive.com today, against what Google requires versus what the research document recommends:

Evidence item	Current state (Doc 2)	Google position (Doc 1)	Category
Screenshots	None; "will be published when real"	Not requested by Google (§15 item 25)	Recommended — strongest cheap proof once real screens exist
Demo video	None; promised when real	Not requested (§15 item 26)	Recommended — the single strongest AI-first evidence available
Working product / MVP	"In development", pre-launch; nothing demonstrated	Required for Start tier ; no maturity threshold published for Scale	Necessary (Start tier) / Cannot determine (Scale)
Beta	None stated	No threshold published	Optional
Waitlist	Open, at famant.com/en; no counts published (honest)	Not requested	Recommended — already satisfied
Feature/AI evidence	Mechanism descriptions + status chips + one described end-to-end flow	AI-first judged case-by-case from available material	Necessary in substance — partially satisfied (descriptions yes, proof no)
Product status	Consistently "in development, pre-launch"	Integrity condition (false info voids incentives)	Necessary — satisfied
Roadmap	None; no dates (deliberate)	Not requested	Optional — current absence is defensible; themed statuses (no dates) would add direction without risk
Launch timing	Not stated	Not requested	Optional — do not publish dates unless certain
Users / traction / metrics	None claimed	No thresholds published (§15 items 27–30)	Optional — absence is compliant; never invent
Testimonials	None	Not requested	Optional
Pricing	None published	Not requested; business model required at Start	Cannot determine from Google requirements whether publication helps — document internally, publish only when decided

Net position: the evidence gap is real but correctly labelled on the site itself. The only *necessary* item is the working MVP for a Start-tier application — an engineering fact, not a website fact. Everything else is recommended-when-real. Do not fabricate interim evidence; that would trade Google's biggest stated integrity risk for a cosmetic gain.

13. Founder and Team Credibility Gap

What Google actually requires: only the applicant's first name, last name, job role and job title as form fields. No founder biography, team page, LinkedIn or public profile is required. **OFFICIAL REQUIREMENT (form fields only)** — Document 1 §9 ("Founder information") and §15 items 14–16.

What the research document recommends: published founder profiles with external corroboration, because unverifiable founders "slow or complicate review" (§19.3) and identity verifiability supports the website requirement. **RESEARCH RECOMMENDATION**

Element	Current state	Official requirement?	Credibility recommendation?
Founder name	Absent from the site	No (application form field only)	Yes — highest-value single addition
Founder bio	Absent	No	Yes — short, factual
LinkedIn	Absent	No	Yes — external corroboration
Team	Absent (placeholder exists on About)	No	Yes, real members only; never intended hires
Technical leadership	Absent	No	Helpful for the AI-first case if real
Company ownership	Not stated (registry facts only)	No	Optional
Company history	Founding year + "journey" section on About	No	Adequate for a 2026 company

Verdict: this is a credibility gap, not an eligibility gap. It requires one founder decision (willingness to be publicly named — Section 24) and one small content addition to the existing About-page placeholder. It should not delay an otherwise-ready application, but it is the best-value website improvement available before one.

14. Legal and Company Identity Gap

Element	Status	Detail
Legal name	Complete	ANTUTIVE AB, used consistently in footer, About, JSON-LD, copyright line

Organisation number	Complete	559576-7228, published site-wide and above the fold on the homepage
Registered seat	Complete	Gothenburg, Sweden; legal form and share capital also published
Company email	Partial	contact@antutive.com published; working state and applicant-mailbox decision NOT VERIFIED
Privacy Policy	Partial	Live at /privacy; explicitly interim; needs qualified review, effective date, and (once the AI stack is real) model-data-flow disclosure
Terms of Service	Partial	Live at /terms; interim website terms; needs review, and product terms before any beta
Cookies	Complete (for current behaviour)	/cookies accurately discloses the single session-storage flag (antutive.intro.played); revisit if analytics are ever added
GDPR posture	Partial	GDPR-oriented notices exist; no adviser review evidenced; heightened duty for a household product possibly touching children's data
Billing identity	NOT VERIFIED	No billing account evidenced; must be created from the company-domain email
Domain alignment (website=email=billing)	2 of 3	Website + published email share antutive.com; billing side does not yet exist
Authorised signatory	NOT VERIFIED	Required in substance by the programme terms at submission

15. Technical Website Gap

Classified honestly: nothing below is a Google program eligibility requirement. "Application Critical" is reserved for items that could actually distort a reviewer's verification of identity or positioning.

Application Critical

- **None.** No current technical defect prevents a reviewer from loading the site, verifying the company, or reading the positioning. This is stated deliberately to prevent SEO polish from being mistaken for eligibility work.

High Priority (identity/positioning hygiene)

- **site.webmanifest agency-era copy** — the only remaining services-identity artefact anywhere in the deployment; contradicts the positioning Google's exclusion list makes sensitive. Trivial fix, high symbolic value.
- **Canonical / Open Graph / sitemap host mismatch (apex vs www)** — the site serves on www but declares apex URLs. One canonical set of company facts everywhere is the standing rule (Doc 1 §19.3); make the metadata agree with the served host.
- **Client-side-only rendering of metadata** — every route's raw HTML ships the homepage title/description; per-route metadata exists only after JS runs. Human reviewers are unaffected (browsers execute JS); link-preview cards and naive crawlers see homepage metadata everywhere. Prerendering/SSG for the 9 static routes would resolve it. Normal engineering improvement — *not* an application gate.

Normal Website Improvement

- **404 returns HTTP 200** — SPA catch-all behaviour; fix at host level or via prerender.
- **Famant hero video not decoding** (valid VP8/Vorbis WebM, HTTP 200, readyState 0 in the audit browser) — diagnose; add a poster fallback so failure is invisible.
- **Mobile truncation** of Famant capability benefit lines at 390 px — wrap, don't ellipsize.
- **Performance/animation verification** — Document 2 explicitly withheld judgement (throttled tab); one untethered pass on real hardware.

Cosmetic / Optional

- Contrast defects (a handful, per Doc 2 §1).
- Intro overlay: add a skip control and respect prefers-reduced-motion.
- Structured data beyond Organization JSON-LD (e.g., per-product schema) — nice-to-have.

16. Design / Redesign Decision

Surface	Assessment (from Document 2)	Action needed
Homepage	8 coherent sections; strongest company-first signal; deliberate Famant demotion; ecosystem section; registration strip	Fix mobile truncation in §5.4 only
Products	Portfolio framing with constellation diagram, Current/Future bands, admission criteria	None
Famant	Full product page, status chips, privacy stance, waitlist; no screenshots (honest)	Fix/fallback the hero video; add real evidence when real
Technology	Own signature diagram; principles; worked example; claim policy; honest architecture placeholder	Content update once the AI stack is committed
About	Company identity, registration facts, mission, journey, Data Delimited; team placeholder	Fill founder/team placeholder
Contact	Contact details, mailto-composing form, Famant redirect block	None identified in supplied material
Legal pages	Working, honest, interim	Legal review; content update in place
Visual consistency	One design system across every route; internal pages carry their own diagrams; "genuinely unified"	None
Animation	Distinctive intro, orbit graphics, ecosystem connector; smoothness unmeasured (audit limitation)	Verify performance once on real hardware; add intro skip
Diagrams / graphical storytelling	Product constellation, ecosystem split, 4-step flow — each does argumentative work	None
Mobile	Text-only hero (acceptable); truncation defect; contrast items	Punch-list fixes

Does Antutive need another redesign? NO.

The strategic problems the redesign was meant to solve — services-company classification risk, Famant-swallows-company risk, missing AI-first identity, missing multi-product architecture, missing legal pages, missing verifiable identity — are demonstrably solved in the current build. What remains is (a) content that cannot exist yet (named stack, product evidence) because the underlying company/engineering facts are not yet settled, (b) one content addition that can happen now (founder identity), and (c) a short technical punch-list (manifest, canonicals, 404, video, truncation, contrast). Rebuilding sections that already work would consume time the eligibility-verification work actually needs, and would risk churning positioning that is currently correct.

17. Claims Readiness Audit

Every material claim class on the current site, tested against Google's false-information condition (incentives void; list-price clawback) and the AI-uplift assessment.

Website claim	Current evidence	Safe to publish?	Google relevance	Required action
"AI-first product company"	Consistent positioning; mechanism-level product descriptions; no counter-signals on the site	Safe	Directly supports the AI-uplift test	Keep; substantiate over time with the named stack and product evidence
Product-first / "built and operated in-house"	Whole-site structure; no services offered	Safe	Supports the agency-exclusion defence	Keep; confirm services-revenue reality at company level (Sec. 11)
"Famant — first flagship product, in development, pre-launch"	Status chips everywhere; waitlist live	Safe	Model integrity posture	Keep labels current as status changes
Famant capability descriptions (scheduling, tasks, documents, meals)	Described as mechanisms <i>with</i> "In development" chips	Safe with qualification (already qualified)	AI-first substance	Never drop the chips before capabilities are real
Company registry facts (AB, org.nr, seat, capital, 2026, VAT)	Registry-verifiable	Safe	Identity verification	None
Data Delimited "sister company" ecosystem	Stated on homepage + About; external link; legal/ownership structure not described	Safe with qualification	Neutral; keep consulting language away from Antutive itself	Optional: one factual sentence on the relationship's legal nature if ever asked
Future products ("announced when real")	Empty labelled slots; admission criteria	Safe	Multi-product credibility without over-claim	None
Google Cloud usage	Not claimed anywhere	Implement/confirm first	Core to the AI uplift narrative	Publish only after commitment is real and correctly named
Gemini usage	Not claimed anywhere	Implement/confirm first	The named qualifying criterion	Same as above; use exact current Google product names, re-verified on application day
Scalability claims	Not made	—	—	Do not add until architecture exists
GDPR / privacy claims	Interim notices; accurate cookie disclosure	Safe with qualification	Credibility; legal obligation independent of Google	Verify first: qualified review before strengthening any compliance wording
Security claims	None made	—	—	Publish only implemented controls, when they exist
Funding / investors / users / traction / testimonials	None claimed	Correctly absent	False claims void incentives	Publish only verified facts, if and when they exist
Launch dates	None published	Correctly absent	Over-claim protection	Only publish certain dates
site.webmanifest description (agency-era)	Contradicts every on-page claim	Remove / rewrite	Residual excluded-category signal	Rewrite now

18. What NOT to Change

Preserve these as-is. Each is currently working, aligned with Google's expectations, and at risk only from unnecessary rework.

- **Antutive master-brand architecture** — company owns every global surface; exactly the anti-"single-product-company" structure the strategy required.
- **Products portfolio page** (Current/Future bands, open slots, admission criteria) — the clearest multi-product proof on the site; the empty slots are honest narrative, not placeholders to "fill".
- **Famant balance and its top-level page + header CTA** — defensible while there is one product; revisit only when Product 2 is real.
- **The claim policy and status-chip system** — this is the site's single greatest asset under a programme whose terms void incentives for false information. Do not let marketing pressure erode it.
- **The vendor-neutral Technology page stance** — do not "fix" it by asserting Gemini before the decision exists; fix it by making the decision, then updating the content.
- **Data Delimited ecosystem section** — correctly framed, correctly excluded from primary navigation, keeps consulting language attached to the sister company rather than to Antutive.
- **Homepage structure** (hero → what we build → portfolio → spotlight → method → ecosystem → registration → closing) — each section does distinct argumentative work.
- **Navigation** — four items + one CTA; adding pages now (blog, careers, roadmap) is explicitly *not* required before applying (Doc 1 §12.2).

- **Visual design system and diagrams** — coherent, distinctive, consistently applied; "visually imperfect but application-ready" does not even apply here, since the audit found the design genuinely unified.
- **Legal-page structure** — the three routes and their honesty are right; only the content matures (review, dates), not the structure.
- **The registration strip and footer identity line** — registry facts above the fold and on every route is exactly the verifiability Google's identity checks reward.

19. Critical Blockers Before Applying

Only genuine blockers. Website polish is deliberately excluded.

Blocker	Evidence	Why it matters	Official?	Tier affected	Required action	Owner	Completion evidence
1. Funding position unknown	No funding stated or confirmed anywhere	Single fact that decides Scale/AI (US\$350k) vs Start (US\$2k); applying to the wrong tier consumes the application and activates the terms	Yes	All (routing)	Written determination + public links if a qualifying round exists	Founder	Signed internal note / links list
2. No Google Cloud billing setup	No account, ID, or domain-aligned billing email evidenced	18-char ID is an application prerequisite; domain match is required for credit approval	Yes	All	Business Google account on antutive.com → billing account → record ID → verify 3-way domain match	Engineering	Console screenshot of ID + alignment check
3. Prior-credit history unaudited	Nothing on record	Hard caps at both tiers; false disclosure voids incentives with list-price clawback	Yes	All	Audit and write down all credits ever received on company accounts	Founder + Engineering	Written audit
4. Working MVP unconfirmed	Famant "in development, pre-launch"; nothing demonstrated	Explicit Start-tier criterion — and Start is the likely target	Yes (Start)	Start	Honest internal MVP assessment; build to MVP if absent	Product + Engineering	Internal demo record
5. Business model undocumented	No pricing/monetisation anywhere; not confirmed internally	Explicit Start-tier criterion	Yes (Start)	Start	One-page business model	Founder	Document on file
6. Gemini/GEAP plan absent	No cloud/model named anywhere, by policy; no internal plan evidenced	The named qualifying criterion of the AI uplift ("use or plan to use")	Yes (AI uplift)	Scale+AI	Stack decision + documented per-capability model plan	Founder + Engineering	Written plan; later, Technology-page update
7. Services-revenue status unconfirmed	Website clean; commercial reality behind the recent services-era positioning unconfirmed	Dev shops/consultancies/agencies are excluded outright	Yes (condition)	All	Founder written confirmation (or disclosure and resolution)	Founder	Signed internal note

20. High-Priority Improvements (pre-application, non-blocking)

- **Founder identity on About** — fill the existing placeholder with name, role, factual bio, LinkedIn (needs founder consent — Section 24).
- **Legal-page review** — qualified adviser pass over /privacy, /terms, /cookies; remove "interim"; add effective dates.
- **site.webmanifest rewrite** — remove the last agency-era artefact.
- **Canonical/OG/sitemap host alignment** — standardise on www.
- **Architecture document + cloud-spend forecast** — company-side, per Document 1 §18 Phases 5–6; the substance of any Google follow-up conversation.
- **Authorised-signatory designation** — who submits and binds ANTUTIVE AB.
- **Confirm the working state of contact@antutive.com** and decide the applicant mailbox.

21. Medium / Low Priority Improvements (normal website polish)

Medium: fix 390 px truncation of Famant capability lines; diagnose the Famant hero video and add a poster fallback; add a model-data-flow disclosure to the privacy page once the AI stack is confirmed; consider a themed (dateless) roadmap block; team profiles beyond the founder as real people consent.

Low: 404 HTTP status; contrast token fixes; intro-overlay skip control and prefers-reduced-motion; prerendering/SSG for per-route metadata; extended structured data; one animation-performance pass on real hardware. None of these affects eligibility; schedule them as ordinary engineering work.

22. Application Readiness Scorecard

Structured assessment scores (0–10), not official Google scoring. Method: each score reflects only documented evidence; unverified areas score what the evidence shows today, not what verification might reveal.

Area	Score	Reason
Company positioning	9/10	Complete, consistent, verifiable; one point held for the absence of any named human
Product-first positioning	9/10	Zero services language; explicit anti-agency statements; portfolio structure
AI-first positioning	7/10	Framing is excellent; substantiation (models, architecture, proof) is deliberately absent
Multi-product readiness	9/10	Portfolio architecture visible in UI; minor metadata/CTA watch items
Famant evidence	2/10	Honest descriptions and a live waitlist, but zero screenshots, demo, users or measured behaviour
AI technical evidence	2/10	Mechanism language and one described flow; nothing named, nothing demonstrated
Google Cloud readiness	1/10	Nothing verified: no account, no billing, no architecture, no claim
Gemini readiness	1/10	No usage, no plan, no naming anywhere
Company credibility	8/10	Registry-level facts unusually strong; no people, no history beyond founding year
Founder/team credibility	1/10	No named person anywhere on the site
Legal readiness	6/10	All three legal routes live and honest, but interim and unreviewed
Website technical quality	6/10	Clean SPA, no console errors, working routes/sitemap/robots; CSR-only metadata, canonical mismatch, 404-as-200, stale manifest
Website design quality	9/10	Unified system across all routes with signature diagrams; minor truncation/contrast defects
Application evidence	3/10	Identity evidence strong; funding, credits, billing, product and architecture evidence absent/unverified
Tier eligibility confidence	3/10	Start tier plausible but MVP/model/credits unverified; Scale blocked on funding; AI uplift additionally blocked on the Gemini plan

Overall Website Score: 66/100 — mean of the ten website-facing areas (company positioning, product-first, AI-first, multi-product, Famant evidence, company credibility, founder/team, legal, technical, design), scaled to 100. High structure/positioning scores; dragged down by the two evidence areas the site honestly labels as not-yet-real.

Overall Application Readiness Score: 51/100 — mean of all fifteen areas, scaled to 100. The gap between 66 and 51 is exactly the company-level verification and Google-stack work that no website change can close.

23. Exact Remaining Action Plan

PHASE 0 — VERIFY ELIGIBILITY (before any further website work)

Task	Why	Owner	Priority	Dependency	Completion evidence
Determine funding position factually (incl. any SAFE); classify sources against Google's qualifying/non-qualifying lists	Decides the tier and the whole route	Founder	CRITICAL	None	Written note + public links if applicable
Audit all Google Cloud credits ever received on company accounts	Hard caps; integrity clause	Founder + Eng	CRITICAL	None	Written audit
Confirm working-MVP status of Famant, capability by capability	Start-tier criterion; sets the evidence plan	Product	CRITICAL	None	Internal status record
Confirm no services/consulting revenue (or disclose and resolve)	Excluded-category condition	Founder	HIGH	None	Signed note
Obtain certificate of incorporation; confirm exact legal name/date	Age evidence if queried	Founder	MEDIUM	None	Certificate on file
Select target tier from the above	Applying to the wrong tier wastes the application	Founder	CRITICAL	All above	Written tier decision

PHASE 1 — CRITICAL APPLICATION BLOCKERS

Task	Why	Owner	Priority	Dependency	Completion evidence
Confirm/create company-domain business email; decide applicant mailbox	Must match website domain	Founder	CRITICAL	None	Send/receive test
Create business Google account + Google Cloud billing account from that email; record 18-char ID	Application prerequisite	Engineering	CRITICAL	Email	Console screenshot
Verify website = email = billing 3-way domain alignment	Required for credit approval	Engineering	CRITICAL	Billing account	Written check
Document the business model (one page)	Start-tier criterion	Founder	CRITICAL (Start)	None	Document
Record VC-funding intention	Start-tier criterion	Founder	HIGH (Start)	None	Written statement
Name the authorised signatory	Terms bind on submission	Founder	HIGH	None	Internal note
If MVP absent and Start is the target: build to working MVP	Start-tier criterion	Engineering	CRITICAL (conditional)	Phase 0 MVP finding	Internal demo

PHASE 2 — WEBSITE EVIDENCE

Task	Why	Owner	Priority	Dependency	Completion evidence
Publish founder profile in the existing About placeholder	Best-value credibility addition	Founder + Web	HIGH	Founder consent	Live section
Legal review of /privacy, /terms, /cookies; de-interim; effective dates	Credibility + legal obligation	Founder + Legal	HIGH	Adviser engaged	Updated pages
Real screenshots on /famant when real screens exist	Fastest product proof	Product + Web	HIGH	Working build	Live images
Record and publish one genuine end-to-end AI flow (the invitation flow)	Strongest AI-first evidence	Product	HIGH	Working build	Live video

PHASE 3 — TECHNICAL / CLOUD READINESS

Task	Why	Owner	Priority	Dependency	Completion evidence
Decide the AI stack: Gemini / Gemini Enterprise Agent Platform / Google Cloud services (or explicitly not)	AI-uplift qualifying criterion; ends the vendor-neutral holding pattern honestly	Founder + Eng	CRITICAL (AI route)	Phase 0 tier decision	Written decision
Write the per-capability model-role plan + one-page architecture & data-flow doc (correct current Google naming; Vertex AI is active, not legacy)	Substance of the AI-first case and of follow-up calls	Engineering	HIGH	Stack decision	Documents
Update /technology with the named architecture	Public AI-uplift evidence	Web	HIGH	Architecture doc	Live page
Build the 6/12-month cloud-spend forecast (year 2 at 20% modelled)	Credit management; onboarding	Eng + Founder	HIGH	Architecture doc	Forecast model

Do not run significant paid Google Cloud workloads before credits are issued	Credits are not retroactive	Engineering	MEDIUM	—	—
--	-----------------------------	-------------	--------	---	---

PHASE 4 — WEBSITE POLISH

Task	Why	Owner	Priority	Dependency	Completion evidence
Rewrite site.webmanifest copy	Last agency-era artefact	Web	HIGH	None	Deployed file
Align canonical/OG/sitemap on www	One canonical identity	Web	HIGH	None	Deployed metadata
Fix 390 px truncation; contrast tokens; video fallback; 404 status; intro skip; optional prerendering	Polish and accessibility	Web	MEDIUM / LOW	None	Deployed fixes

PHASE 5 — FINAL APPLICATION REVIEW

Task	Why	Owner	Priority	Dependency	Completion evidence
Re-read all official criteria pages and the programme terms on submission day; dated screenshots	Terms change at Google's discretion	Founder	CRITICAL	Phases 0–4	Dated screenshots
Run the Section 26 checklist; confirm one canonical set of company facts everywhere	Inconsistency invites manual review	Founder	CRITICAL	All	Signed checklist
Submit signed in with the business account; authorised signatory submits; declare AI startup type as appropriate	Form requirements; terms bind on submission	Founder	CRITICAL	All	Submission confirmation
Diarise response window (few business days; 10+ if manual review); respond promptly to follow-ups	Published timeline	Founder	MEDIUM	Submission	Calendar entry

24. Founder Decision List

1. **Funding:** What is the factual funding position, source by source? Does any of it qualify (institutional/VC equity, incl. SAFEs)? → decides the tier.
2. **Target tier:** Start now, or wait for a qualifying round and target Scale + AI uplift?
3. **Prior Google Cloud credits:** Has the company (any founder acting for it, on company accounts) ever received credits, and how much?
4. **Billing ownership:** Who owns and administers the Google Cloud billing account, and which company-domain mailbox is the applicant identity?
5. **Public founder identity:** Are you willing to be named, with bio and LinkedIn, on the About page?
6. **Product launch status:** Is there a working MVP today? What is the honest capability-by-capability status?
7. **Business model:** What is the monetisation model (documented, even if unpublished)?
8. **VC intention:** Will the company state an intention to seek venture funding (Start-tier criterion)?
9. **Google Cloud / Gemini commitment:** Will Famant be built on Gemini and the Gemini Enterprise Agent Platform (or Vertex AI, as the real architecture dictates)? This is the AI-uplift gate and unlocks the Technology-page update.
10. **Services-business status:** Does ANTUTIVE AB earn any services/consulting revenue? (Includes clarity that Data Delimited's consulting stays legally and commercially separate.)
11. **Public roadmap:** Publish a themed, dateless roadmap, or keep the current silence?
12. **Authorised signatory:** Who has authority to accept the programme terms — including the investor-disclosure and confidentiality clauses — on behalf of ANTUTIVE AB?
13. **Privacy advice:** Engage a qualified adviser for household/children's data before any beta?

25. Engineering Decision List

1. **Google Cloud architecture:** services, environments (dev/staging/prod projects under one billing account), region and EU data-residency choices, with regional availability confirmed per service.
2. **Gemini integration:** which models for which capability (dialogue, extraction, scheduling reasoning, summarisation, multimodal document understanding); agent orchestration via Gemini Enterprise Agent Platform / Vertex AI as the real plan dictates; evaluation approach.
3. **Billing:** create the billing account from the company-domain email; record the 18-character ID; budgets, alerts and AI quota caps before scaling (per Document 1 §22).
4. **Production path:** plan deployment such that significant paid usage starts after credit issuance (credits are not retroactive).
5. **Product evidence:** get one genuine end-to-end AI flow working and recordable (the invitation flow); produce real screenshots.
6. **Technical architecture doc:** one page + data-flow diagram for follow-up conversations.
7. **Security baseline:** least-privilege IAM, secrets management, family-tenant separation — implement before ever claiming.
8. **Website technical punch-list:** webmanifest rewrite; canonical/OG/sitemap on www; 390 px truncation; Famant video decode + poster fallback; 404 status; contrast tokens; intro skip; optional prerender/SSG for per-route metadata.

26. Final Pre-Application Checklist

Area	Item	Status
Eligibility	Company age within tier window (founded 2026)	DONE
	Not in an excluded business category (website posture)	PARTIAL — founder revenue confirmation pending
	Country of primary business (Sweden) acceptable	VERIFY (discretionary; low risk)
	Prior Google Cloud credits within cap	VERIFY
Company	Legal identity published and registry-verifiable	DONE
	Certificate of incorporation on file	VERIFY
	Authorised signatory named	MISSING
Funding	Funding position determined factually	MISSING
	Public verification links (if Scale route)	BLOCKED — depends on funding determination
Google Cloud	Business Google account on antutive.com	VERIFY / MISSING
	Billing account + 18-character ID recorded	MISSING
	Website = email = billing domain alignment	MISSING (2 of 3 exist)
	Architecture document + spend forecast	MISSING (recommended)
Gemini / AI	AI-first positioning public	DONE
	Gemini / GEAP usage or documented plan	MISSING (AI-uplift gate)
	Technology page names the stack	BLOCKED — depends on stack decision
Product	Product page with honest status labels	DONE
	Working MVP (Start tier)	VERIFY
	Business model documented	MISSING
	Waitlist live and accurately framed	DONE
Website	Public site live on company domain; no placeholder content; no unverified claims	DONE
	webmanifest / canonical host hygiene	PARTIAL
	Mobile + link audit	PARTIAL (truncation, contrast open)
	Screenshots / demo published	MISSING (when real)
Founder / Team	Founder named with external corroboration	MISSING
	Applicant name/role/title ready for the form	VERIFY
Legal	Privacy / Terms / Cookies live	DONE (interim)
	Qualified legal review completed	MISSING
	Programme terms read; confidentiality + investor-disclosure clauses understood	VERIFY
Technical	No dead links; sitemap/robots/404 route present	DONE
	404 status, video decode, prerender items	PARTIAL
Evidence	Company identity evidence pack	PARTIAL (registry facts public; certificate pending)
	Product/AI evidence pack (screens, demo, architecture)	MISSING
Application	Tier selected deliberately	BLOCKED — depends on Phase 0
	Official criteria re-read on submission day	NOT APPLICABLE YET
	Submission by authorised signatory via business account	NOT APPLICABLE YET

27. Final Recommendation

Is the current Antutive positioning correct?

Yes. AI-first product company, master brand over a growing portfolio, honest early-stage posture — this is the positioning the Google program rewards, and it is executed consistently across every route.

Does the website still look like a consulting/services company?

No. No services are offered anywhere; the site argues explicitly against the delivery model. The single residual artefact is the stale site.webmanifest description — fix it and the last trace is gone.

Does the website correctly support multiple products?

Yes (9/10). The portfolio structure is visible in the UI — Current/Future bands, open slots, admission criteria — and Product 2 can be added without repositioning.

Is Famant positioned correctly?

Yes. First flagship, in development, honestly labelled, clearly owned by ANTUTIVE AB, promoted enough to carry the AI-first case without swallowing the company. Correct balance; no change needed.

Is AI-first positioning credible?

As positioning, yes — the falsifiable "remove the intelligence and there is no product" framing is exactly right. As evidence, not yet: nothing is named, nothing is demonstrated. Credibility is currently carried by honesty rather than proof, which is acceptable pre-launch and will strengthen automatically as real evidence is published.

Is Google Cloud alignment currently demonstrated?

No. NOT VERIFIED anywhere: no account, no billing, no architecture, no claim. All of it is buildable within days except the architecture itself.

Is Gemini alignment currently demonstrated?

No. No usage, no plan, no mention — by deliberate policy. Google accepts a plan, so this gap closes with a decision plus documentation, not necessarily with implementation.

Does the website require another redesign?

No. Structure, positioning and design are sufficient. Anyone proposing a further redesign should be required to point at a specific Google criterion it would satisfy — there is none.

What website changes are still necessary?

In order of value: founder identity on About; legal-page review (de-interim); webmanifest rewrite; canonical host alignment; then, gated on company decisions and product reality: Technology-page architecture naming, screenshots, one recorded AI flow; then the minor technical punch-list.

What non-website actions are still necessary?

Phase 0 fact-finding (funding, credits, MVP, business model, services revenue); Google Cloud account/billing/domain alignment; the AI-stack decision and its documentation; architecture doc and spend forecast; authorised signatory; privacy advice before any beta.

What is the single biggest blocker?

The undetermined funding position. It decides which tier is even available, and no other preparation can be finalised rationally until it is answered. (Operationally, the billing-alignment setup is the biggest *buildable* blocker.)

Which program tier currently appears most realistic?

The Start tier (US\$2,000, 12 months) — subject to confirming a working MVP, a documented business model, a clean credit history and a VC intention. The Scale + AI uplift (up to US\$350,000) becomes the target if and when a qualifying institutional round exists; company age and (presumably) credit history would still permit it.

Should Antutive apply now?

Not yet. Submission consumes the application and activates the programme agreement, and today neither the tier choice nor three stated prerequisites (billing ID, domain alignment, credit disclosure) can be completed. This is weeks of mostly administrative work, not months of rebuilding.

What must happen immediately before applying?

(1) Phase 0 answers in writing; (2) business email + Google Cloud billing account + 3-way domain alignment; (3) tier decision; (4) for Start: MVP and business-model confirmation; for Scale/AI: funding links and the documented Gemini plan; (5) re-read the official criteria and terms on submission day, and submit via the authorised signatory on the business account.

Final recommendation:

Do not redesign. Verify, decide, then apply. The website has done its job and is no longer the constraint — protect its claim discipline and add only content that becomes true. Redirect all remaining effort to the company-level facts Google actually gates on: determine the funding position, audit credits, stand up the domain-aligned billing account, confirm the MVP and business model, and make the Gemini/Google Cloud commitment that unlocks both the AI-uplift narrative and the Technology page's final section. On current evidence, prepare a Start-tier application as the realistic near-term route, and treat the Scale AI tier as the milestone that a qualifying funding round — not a website change — will unlock.

End of report. All Google-side statements trace to Document 1 (official pages read 28 July 2026; re-verify before applying). All website-side statements trace to Document 2 (audit of 7 August 2026; Executive Summary and §§2–6 as supplied). Items neither document could confirm are marked NOT VERIFIED throughout. This document is a structured readiness assessment, not legal advice and not a Google evaluation.
