

Antutive Website Positioning and Redesign Strategy

Optimized for the Google for Startups Cloud AI Program

COMPANY	Antutive (ANTUTIVE AB, org.nr 559576-7228, Gothenburg, Sweden)
FLAGSHIP PRODUCT	Famant — AI-powered family management and household coordination platform (pre-launch)
PREPARATION DATE	6 August 2026
SOURCE DOCUMENTS	1. Google for Startups Cloud AI Program — Complete Analysis and Application Readiness Guide (Rev. 2, 28 July 2026) 2. Antutive Current Website Analysis — Complete Content, Positioning, Structure and Messaging Audit (6 August 2026)
DOCUMENT STATUS	Execution blueprint for website positioning, messaging, information architecture and application readiness. No company fact in this document is invented; every claim requiring verification is labelled.

How to read this document

Every major conclusion and recommendation carries one of five source classifications. Nothing labelled as a strategic recommendation is a Google rule, and nothing is presented as a Google rule unless the research document records it as one.

LABEL	MEANING
OFFICIAL GOOGLE REQUIREMENT	Directly stated as an eligibility, application or program requirement in the Google Cloud research document (its "OFFICIAL REQUIREMENT" classification).
OFFICIAL CONDITION / LIMITATION	A condition, exclusion, restriction, uncertainty or contractual limitation stated by Google (the research document's "OFFICIAL CONDITION", "OFFICIAL LIMITATION" or "NOT SPECIFIED" findings).
RESEARCH RECOMMENDATION	Advice contained in the Google Cloud research document but not presented there as an official Google rule.
CURRENT WEBSITE FINDING	A factual observation documented in the Antutive Current Website Analysis of 6 August 2026 (referenced by its section, W-, C- and E-identifiers).
STRATEGIC RECOMMENDATION	This document's own proposed action, derived from comparing the two source documents. Not a Google rule.

Abbreviations used: "Research Guide \$n" refers to the Google for Startups Cloud AI Program Analysis and Application Readiness Guide, Revision 2. "Website Analysis \$n" refers to the Antutive Current Website Analysis. W-numbers are documented website weaknesses (Website Analysis §19), C-numbers are documented contradictions (§16), E-numbers are evidence-register entries (§21). GEAP = Gemini Enterprise Agent Platform, the name Google used for its

agent platform on the official pages reviewed on 28 July 2026; the research guide instructs that exact current Google product names be re-verified on the day of application and notes that Vertex AI remains an active Google Cloud product.

Validity note carried over from the research document. Google states that acceptance is at its discretion and that program terms and incentives may change at any time. Every Google figure, criterion and condition referenced here reflects the official pages as read on 28 July 2026 and must be re-verified immediately before an application is submitted. This strategy inherits that constraint in full.

SECTION 1

1. Executive Summary

1.1 Where Antutive stands today

The current antutive.com presents Antutive as a Swedish build-for-hire product engineering company. The Website Analysis classified every substantive positioning statement on the site and counted **21 service or consulting signals against 2 product signals** (Website Analysis §9, Table 9.1). Three of the five inner pages sell a delivery methodology, engagement models and client pricing structures. Famant, the company's only owned product, appears in exactly two places — one homepage card and one block on the Products page — with no dedicated page, no navigation entry, no screenshot, and every conversion path leaving the domain for famant.com (W5). AI exists on the site as the strapline "AI Solutions, Human Impact" and almost nowhere else: two of six pages contain zero body references to AI, and the most concrete AI capability described on the site belongs to the sister company Data Delimited, not to Antutive (Website Analysis §10; W4, W10). **CURRENT WEBSITE FINDING**

1.2 The desired positioning

Antutive should present itself as an **AI-first product company building and operating Famant**, its AI-powered family management and household coordination platform — a product-first technology startup whose central purpose is building, operating and scaling its own product, with AI presented as the product's foundation wherever that is genuinely supported by the build and by a concrete, documented plan to use Gemini and Google's agent platform. **STRATEGIC RECOMMENDATION**

1.3 The biggest mismatch

The single largest conflict between the current website and the program is not a matter of emphasis but of category. Google states it is **unable to accept dev shops, consultancies or agencies**, and the Start tier explicitly excludes service agencies and traditional small businesses (Research Guide §9; cloud.google.com/startup/faq and /startup/pre-funded). **OFFICIAL GOOGLE REQUIREMENT** The current website is, in the Website Analysis's own words, "predominantly a development agency and software services company" whose comparison block argues against "generic dev agencies" from inside the category (§7, §9). A Google reviewer forming the case-by-case AI-first judgement from public material (Research Guide §12.3) would today find a services business with an AI strapline. The website, as it stands, actively argues against Antutive's eligibility.

1.4 Strengths to retain

- **Verifiable legal identity.** ANTUTIVE AB, org.nr 559576-7228, Swedish Aktiebolag, Gothenburg, founded 2026, VAT-registered — published consistently and externally checkable (E10, E36). This directly serves Google's identity-verification interest and the founding date sits comfortably inside both the five-year Scale window and the 24-month Start window.
- **A real product with a live external presence.** Famant exists, has its own live site and open waitlist, and the famant.com footer reciprocates ownership ("© 2026 Famant · by Antutive") (E51).
- **Writing and design quality.** The copywriting is plain, confident and human; the visual system is consistent and professional (Website Analysis §12, §18). The craft can be redirected rather than rebuilt.
- **Domain and email foundation.** antutive.com is live and contact@antutive.com exists — the raw material for Google's mandatory website/email/billing domain match is already in place (E41).
- **Honest tone.** The site already uses integrity devices ("No pitch, promise", non-conflict clause) that fit the honest-status-label discipline the research document demands.

1.5 Weaknesses to correct

- **Agency-shaped identity** across navigation, pages, CTAs and the contact form (§9, §14; W12) — a mandatory-exclusion risk, not a style problem.
- **AI claimed in the brand, absent from the content** (W4), with the concrete AI story belonging to Data Delimited (W10).
- **Famant under-presented and off-site:** no page, no navigation item, no screenshot, no demo (W5, W7).
- **Non-existent legal pages** behind a footer that advertises them, on a site claiming GDPR compliance 13+ times and collecting personal data (W1, C12, C13).
- **Unsupported quantified claims** ("3x faster delivery", "24h critical response") and an implied portfolio that is never shown (W6, C19) — dangerous under program terms that allow Google to void incentives where false information is provided (Research

Guide §19.1). **OFFICIAL CONDITION / LIMITATION**

- **No human being named anywhere** on the site (W3), and technical hygiene failures: identical metadata on all routes, no sitemap, unstyled error page, template slugs such as /growth-marketing (W8, W13, W14).

1.6 The recommended transformation

The central strategic shift is an **inversion of figure and ground**. Today, client services are the company and Famant is the proof point (“Proof that we use our own methods”, E06). The redesigned website must make Famant the company’s purpose and remove services as a public identity: a product-led homepage, a dedicated Famant product page carrying the AI-first case with honest status labels, an AI & Technology page stating the intended Gemini and agent-platform architecture, working legal pages, a named founder, real screenshots and one genuine end-to-end demo. Service methodology content is retired from the navigation; the services business model question itself is a founder decision that precedes the redesign (see §15 of this document).

STRATEGIC RECOMMENDATION

1.7 Most urgent actions before applying

#	ACTION	BASIS	PRIORITY
1	Founder answers the Phase-0 questions: funding position (determines whether the US\$350,000 Scale AI route exists at all), services-revenue position, prior Google Cloud credits, authority to sign (Research Guide §18 Phase 1, §20).	RESEARCH RECOMMENDATION supporting official criteria	Critical
2	Align website, business email and Google Cloud billing account on the antutive.com domain; record the 18-character billing account ID.	OFFICIAL GOOGLE REQUIREMENT	Critical
3	Remove every unsupported claim (3x faster, 24h SLA, implied portfolio, “EU AI Act compliant by design”, blanket GDPR-compliance statements) and every agency/consultancy framing.	OFFICIAL CONDITION / LIMITATION + CURRENT WEBSITE FINDING	Critical
4	Publish the AI-first product positioning on the homepage and a full Famant product page with honest per-capability status labels.	RESEARCH RECOMMENDATION (Guide §12.2 items 3–5, §14)	Critical
5	Publish working Privacy Policy, Terms and cookie handling, legally reviewed; correct or verify the Famant “launches Q3 2026” and pricing statements (Q3 2026 is now current — the claim is either true and provable or must change).	RESEARCH RECOMMENDATION and likely legal obligation	Critical
6	Verify and document the intended Gemini / agent-platform architecture so the “plans to use Gemini” criterion can be claimed truthfully.	OFFICIAL GOOGLE REQUIREMENT (plan accepted)	Critical

What the website cannot fix. The research document is unambiguous: the hardest gate for the AI program is qualifying institutional equity funding (pre-seed/seed within five years or Series A within twelve months; angel, friends-and-family, crowdfunding, prize, private-equity and government-grant funding do not qualify for Scale). Nothing on any website changes that. If qualifying funding does not exist, the realistic route is the Start tier at US\$2,000 — which requires a working MVP and a clear business model and still excludes service agencies. The redesign in this document makes Antutive credible for either route; it does not manufacture eligibility for the higher one. (Research Guide §3, §9, §24.) **OFFICIAL GOOGLE REQUIREMENT**

SECTION 2

2. Source-Based Findings

2.1 Google Program Findings

Official requirements that touch the website directly

- Only three website-related points are official, and all three are hard: (1) a publicly available company website must exist; (2) the business email used to apply must match the website domain; (3) for credits to be approved, the website domain must match the email domain *and* the email domain associated with the Google Cloud billing account (Research Guide §12.1). Google requires no specific page, section, screenshot, demo, legal page or team page. **OFFICIAL GOOGLE REQUIREMENT**
- Google is “unable to accept dev shops, consultancies or agencies”; Start tier additionally excludes service agencies and traditional small businesses (Guide §9). Positioning “must not read as services” is the evidence dimension Google itself names. **OFFICIAL GOOGLE REQUIREMENT**
- The AI uplift requires being an **AI-first startup**: AI in the company’s foundational structure and strategy, not a bolt-on productivity layer; the product must use, *or plan to use*, Gemini or the Gemini Enterprise Agent Platform as a foundation of the primary product. A stated plan is accepted. Assessment is case-by-case and discretionary (Guide §5, §9). **OFFICIAL GOOGLE REQUIREMENT**
- Scale/AI tier gates: institutional or VC equity funding in the stated windows (SAFEs eligible; angel, friends-and-family, crowdfunding, prize, private equity, government innovation grants excluded); founded within five years; no more than US\$5,000 in prior Google Cloud credits; funding verifiable through public online links. Start tier gates: founded within 24 months; working MVP; clear business model; intention to seek venture funding; no credits beyond the free trial (Guide §6, §9). **OFFICIAL GOOGLE REQUIREMENT**
- Providing false information can void incentives and allow Google to invoice at list price as though the incentives never applied (Guide §19.1, program terms). This makes every unverified public claim an application liability, not just a marketing weakness. **OFFICIAL CONDITION / LIMITATION**

Official conditions, limitations and uncertainties

- Credits are service credits only: non-transferable, non-refundable, not cash, expiring on a console-stated Credit Expiration Date; year two covers only 20% of usage (Guide §7). **OFFICIAL CONDITION / LIMITATION**
- Google publishes no scoring rubric, no country list, no team/traction/revenue thresholds, no demo or screenshot requirement, and prefers public links over pitch decks for funding verification (Guide §9, §11). Company age shows a documented five-versus-ten-year inconsistency across two official pages; five years is the safer planning assumption (Guide §9). **OFFICIAL CONDITION / LIMITATION**
- Tier assignment is decided by Google, not the applicant; acceptance is discretionary; submission itself brings the program terms into effect (Guide §6, §10). **OFFICIAL CONDITION / LIMITATION**

Research-document recommendations relevant to the website

- The public website is the primary artefact through which a reviewer forms the AI-first and business-type judgements; a site that reads as services or hides the AI dependency creates avoidable classification risk (Guide §12.3). **RESEARCH RECOMMENDATION**
- Nine items genuinely matter before applying (Guide §12.2): live site; domain alignment; clear AI-product-company positioning; a clear Famant explanation; accurate product status; company and contact information; working Privacy Policy and Terms; no agency positioning; no false claims. Everything else — Responsible AI, architecture, roadmap, blog, careers — is recommended but must not delay an otherwise-ready submission. **RESEARCH RECOMMENDATION**
- The Famant page should lead with mechanism, not adjectives: one concrete AI behaviour end-to-end, the Google model or platform performing it, an honest status label, and what happens when the AI is wrong (Guide §14). **RESEARCH RECOMMENDATION**

2.2 Current Website Findings

- Positioning:** 21 service signals vs 2 product signals; dominant identity is a discovery-led bespoke development firm differentiating on IP transfer, speed and EU jurisdiction (§9, §20). The contact form’s seven “Area of Interest” options are all build/advisory services; none is a product or AI option (E43).

- **AI:** a complete text-search census found the strapline, one three-word product bullet (“Full AI capabilities”), two regulatory claims (“EU AI Act Ready”), and a partner section whose concrete AI capability belongs to Data Delimited. “Machine learning”, “LLM”, “generative”, model names, providers and cloud platforms are entirely absent (§10).
- **Famant:** described in words only, labelled “voice-first” rather than AI-powered, subordinated as proof of method, spelled inconsistently across the two owned properties (FAMANT vs Famant), and given a different value proposition on each (C10, C11). Claims already published: Q3 2026 launch, 0 SEK and 79–129 SEK tiers, calendar integrations, Swedish/English voice (§8).
- **Credibility profile:** institutional credibility strong (registry-checkable identity), human credibility zero (no person, client, testimonial, photo, social profile, press, or delivered work) (§13).
- **Integrity risks:** unsupported quantified claims presented as statistics (W6); implied portfolio (“every product we’ve built”) never shown (C19); GDPR compliance claimed 13+ times with no privacy policy in existence (W1); consent checkbox referencing a policy that cannot be read (C13); “EU AI Act compliant by design” with undefined scope and no described AI system (E37).
- **Technical:** client-side rendered SPA with an empty HTML shell; identical title/description on all six routes; no og:image, sitemap or robots.txt; unstyled framework error on any unrouted URL; template slugs /growth-marketing and /custom-platform and anchors #geo/#saas contradicting content (W8, W13, W14, C5, C6, C17).

2.3 Combined Strategic Interpretation

Reading the two documents against each other produces five load-bearing conclusions:

1. **The mandatory domain trio is achievable now.** Site, email and (once created correctly) billing account can all sit on antutive.com. This is the rare hard requirement that is fully within reach. **STRATEGIC RECOMMENDATION**
2. **The website’s greatest program risk is classification, not quality.** The site is well made — and well made in the direction of an excluded business type. Every hour spent polishing service content deepens the risk (Guide §19.2 names “a website that does not look like a product company” as an eligibility concern). **STRATEGIC RECOMMENDATION**
3. **The AI-first case must move from Data Delimited and from adjectives to Antutive and mechanisms.** Famant’s described features (agentic tasks, document OCR, conflict detection, natural-language search) are AI-class capabilities that the site never labels or explains as AI (§10). The substance for a truthful AI-first story already exists in concept; the site simply does not tell it, and no Gemini/agent-platform plan is published anywhere. **STRATEGIC RECOMMENDATION**
4. **Integrity cleanup is as important as repositioning.** Program terms make false information a voiding event; the current site carries several unverifiable headline claims. Removing them is both an ethical and a contractual protection. **STRATEGIC RECOMMENDATION**
5. **The decisive blockers are company-level.** Funding position, services-revenue position, prior-credit history and billing alignment decide the tier and the eligibility; the website decides whether the reviewer believes what the application says. Both workstreams are needed; neither substitutes for the other. **STRATEGIC RECOMMENDATION**

SECTION 3

3. Google Expectation Mapping

Each row maps one Google expectation (official or research-recommended) against the current website evidence. “Company-level dependency” identifies what must be true in the business before the website action is honest or effective. Priorities: **Critical** = blocks or materially endangers an application; **High** = significantly affects reviewer judgement; **Medium** = strengthens the case; **Low** = polish.

GOOGLE EXPECTATION	SOURCE CLASSIFICATION	CURRENT ANTUTIVE STATUS	EXISTING WEBSITE EVIDENCE	GAP	REQUIRED WEBSITE ACTION	COMPANY-LEVEL DEPENDENCY	PRIORITY
Publicly available company website	OGR	Satisfied	antutive.com live, six routes, professionally executed (Website Analysis §2–3)	None on existence; large gaps on content	Retain the domain and hosting; execute the repositioning in this document	None	Critical
Business email matches website domain	OGR	Satisfiable now	contact@antutive.com published three times on Contact (E41)	Applicant mailbox not confirmed as the one used for Google account	None beyond keeping the domain visible and consistent	Create/confirm the applicant’s @antutive.com mailbox; use it for the application	Critical
Billing-account email domain matches website + email	OGR	Unverified	None — not a website artefact	Billing account existence and domain association unknown	None (website side already consistent)	Create Google Cloud account with @antutive.com email; record 18-character billing ID; verify the three-way match	Critical
Not a dev shop, consultancy or agency; positioning must not read as services	OGR	Contradicted	21 service signals; agency-category comparison block; seven service-only form options (§9, E26, E43)	The site reads as the excluded category	Remove/retire services pages, engagement models, client pricing tiers, pain matrix, service CTAs and form options; product-first rebuild per §10–12, §15 of this document	Founder decision on whether any services revenue continues, and honest disclosure if it does (Guide §20 Q6)	Critical
AI-first: AI foundational to structure and strategy, not bolt-on	OGR	Contradicted on the site; plausible in the product concept	AI census: strapline + one bullet + regulatory claims; concrete AI belongs to Data Delimited (§10)	No AI story, mechanism, or evidence owned by Antutive	Homepage AI-first positioning statement; Famant page describing each AI capability’s mechanism with status labels; AI & Technology page	Engineering confirmation of what is actually built vs planned; a real Gemini/agent-platform architecture plan	Critical

Uses or plans to use Gemini / Gemini Enterprise Agent Platform as product foundation	OGR	Absent	No cloud provider, model or platform named anywhere (§17)	The qualifying platform is never mentioned	Publish intended Gemini model roles and agent-platform usage on the AI & Technology page, labelled as planned where planned	Technical lead documents the intended architecture; naming re-verified against current Google product names on application day	Critical
Accurate product status; no false information (voiding condition)	OGC	At risk	"3x faster", "24h SLA", implied portfolio, blanket GDPR claims, "EU AI Act compliant", "launches Q3 2026" (W6, C18, C19, E37)	Multiple published claims cannot be evidenced	Remove or evidence every quantified and compliance claim; apply status labels to every Famant capability; correct launch/pricing statements to verified fact	Founder/product confirmation of true status, launch position and pricing	Critical
Institutional equity funding (Scale/AI tier)	OGR	Unknown	No funding statement on site (correctly so if unfunded)	Eligibility for the US\$350,000 route undetermined	None until confirmed; publish investor facts only if real and consented (Guide §12.3)	Founder determines funding position factually; assembles public verification links, or targets Start tier	Critical
Company age within limits	OGR	Satisfied on published facts	"Founded 2026" on About; org number checkable (E36)	None, if registry date confirms 2026	Keep founding year and registration details published consistently	Certificate of incorporation on file; registry date confirmed	High
Prior Google Cloud credits within caps	OGR	Unknown	Not a website artefact	Credit history unaudited	None	Audit all credits ever received on company accounts	Critical
Working MVP + clear business model (Start tier)	OGR	Unverified	Famant described with published consumer pricing but zero product evidence: no screenshot, demo or app-store presence (W7, §8)	MVP reality and business model not demonstrated	Publish real screenshots, one end-to-end demo, and the actual pricing/business model once confirmed	Product team confirms working functionality; founder documents business model	Critical
Funding verifiable via public links; no false funding claims	OGR	Compliant by absence	No funding claims on site	None	Continue to publish nothing about funding until real	Assemble public links if a round exists	Medium
Clear AI-product-company positioning visible to a reviewer	RDR	Absent	Footer descriptor and hero describe a services firm (E01, E02)	Positioning line absent	One-line AI-first product-company statement in hero, About and footer	Founder approves the positioning decision in §5	Critical

Clear Famant explanation with problem, solution, capabilities, status	RDR	Partial	One block: features, pricing, waitlist; no page, no visuals (§8)	No dedicated page; no mechanism; no status labels; no visuals	Build the Famant page per Guide §14 and §7 of this document	Capability-by-capability status from product team	Critical
Working Privacy Policy and Terms	RDR (likely legal obligation)	Contradicted	Footer advertises three legal items; none exists (W1, E16)	Legal pages absent while personal data is collected	Publish legally reviewed Privacy Policy, Terms, cookie handling; make footer links functional	Legal adviser review; privacy advice on household/children's data before any public beta (Guide §17)	Critical
Product evidence: screenshots and demo	RDR	Absent	Only two logo raster files exist on the whole site (E49)	No visual proof of any software	Publish real screenshots of working screens only; one recorded end-to-end AI flow	Working build; decision on which flows are demonstrable	High
Founder and team verifiability	RDR	Absent	No person named anywhere (W3, E40)	Zero human credibility	Team page with founder name(s), factual bios, LinkedIn corroboration	Founder consent; accurate roles only	High
Company and contact information for follow-up	RDR	Largely satisfied	Domain email, hours, legal identity on Contact (E41)	No street address or phone	Add registered address where lawful; keep domain email prominent	Confirm what address may be published	Medium
No placeholder content or misleading claims anywhere	RDR supporting OGC	Partial	No lorem ipsum found; but unsupported claims and dead legal links function as integrity defects (§16)	Claim hygiene	Full claim audit against §18 matrix of this document	Founder sign-off on every retained claim	Critical
Technical quality: mobile, links, metadata	RDR	Mixed	Internal links all work; but identical metadata, no sitemap/robots, unstyled 404, empty HTML shell (W8, W13)	Discoverability and finish	Per-page metadata, prerender/SSR, sitemap, robots, designed 404, og:image, slug fixes	None	High
Country of primary business acceptable	OGC (discretionary)	Sweden; likely low risk but unpublished	Gothenburg, Sweden stated site-wide	Geographic acceptance is discretionary and unpublished	Keep the Swedish identity prominent (it is also a trust asset)	Confirm with startup support only if doubt arises	Low

Rows sourced from Research Guide §9, §12, §15–17 and Website Analysis §3–19. Funding, prior credits, billing alignment and the services-revenue question are business eligibility or evidence issues that no website change can solve; they appear here because the website must not contradict whatever the truthful answers turn out to be.

SECTION 4

4. Current Website Positioning Assessment

4.1 What currently works

- **Legal transparency.** The registry-checkable corporate identity block (E36) is the site’s single most valuable asset for identity verification and should survive every redesign decision.
- **Craft.** Copy quality, tonal discipline, a coherent design system, and a tested, dead-end-free link architecture (Website Analysis §18). The execution capability the site demonstrates is real evidence of its own kind.
- **An honest instinct.** “No pitch, promise”, the non-conflict clause and free-session framing show a company temperamentally suited to the honest status-label regime the program demands.
- **A real product and a real sister company.** famant.com is live with a reciprocal ownership line; datadelimited.com is live and reciprocates (E51, E52).

4.2 What creates credibility — and what creates confusion

Credibility: the org number, legal form, VAT registration, invoicing currencies, domain email, stated hours, and process specificity (§13, Table 13.1). **Confusion:** the strapline promising a category the content never delivers (C1); the ecosystem card claiming five service lines that appear nowhere else (C2); a Products page that is two-thirds services (C7); “partner” versus “sister company” for Data Delimited, undefined either way; two names and two value propositions for the flagship product across two owned domains (C10, C11); and template slugs contradicting page content (C5, C6).

4.3 What makes Antutive appear service-based

- The hero proposition itself: “The product you need doesn’t exist yet. So we build it.” — a build-for-hire promise (E02).
- Two full service pages (How We Work, Custom Build) with deliverables, engagement models and a comparison block that argues against other agencies from inside the agency category (E25, E26).
- The six-row pain matrix — all six scenarios are client problems Antutive is hired to solve (E07).
- Three client “pricing” tiers that are engagement models, not product SKUs (E34); a delivery roadmap for client projects; a “Build Together” partnership block.
- The conversion machinery: 24 of 33 CTAs lead to a sales conversation about building software; the contact form’s seven options are all services (§14, E43).
- Client-segment profiling (SME / scale-up / enterprise / product founder) on How We Work (E22).

4.4 What makes Antutive appear product-based

- The “Built by us” homepage card and the Famant block on Products — features, two-tier pricing, launch quarter, live waitlist (E06, E28–E32). That is the entire product surface: one card and one block out of roughly fifty sections site-wide (§9).

4.5 What makes Antutive appear AI-focused — and what defeats it

The strapline on every page, the “EU AI Act Ready” posture, and the ecosystem narrative are the AI-forward elements. Each is defeated by its own context: the strapline is the smallest text in the header and is never elaborated (E18); the AI Act claim describes regulation, not capability, for a company that describes no AI system it operates (E37); and the ecosystem section attributes the concrete AI capability to Data Delimited and sends the AI-interested visitor to that company’s domain via its primary button (E13, E15, W10). Meanwhile Famant’s genuinely AI-class features are labelled “voice-first” and never explained as AI (E29, §10 conclusion).

4.6 What weakens each claim the application depends on

CLAIM THE APPLICATION NEEDS	WHAT CURRENTLY WEAKENS IT ON THE WEBSITE	EVIDENCE
“Antutive is an AI-first startup”	Zero AI body content on both service pages; no model, provider or platform named anywhere; the AI story belongs to the sister company; no AI option exists even in the contact form.	§10; E19, E24, E43; W4, W10

"Antutive is a product company"	Product-to-service signal ratio 2:21; Famant absent from About, navigation and four of six pages; the homepage explicitly frames Famant as proof of the services method.	§9; E06; W5, W12
"Antutive is a startup"	No founder, no team, no roadmap, no funding language, no momentum signals; reads as a boutique consultancy (§12 "perceived startup identity").	W3; §12
"The application is truthful"	Unsupported statistics presented as fact; implied portfolio; 13+ GDPR compliance assertions with no policy; consent checkbox referencing a non-existent document; undefined EU AI Act compliance claim.	W1, W6; C12, C13, C18, C19; E37
"The company is application-ready"	Unstyled developer error on any wrong URL; identical metadata site-wide; template slugs; no sitemap/robots; content invisible to non-JS crawlers.	W8, W13, W14; E45–E48

4.7 Inconsistencies, technical and legal issues affecting credibility

- **Factual self-contradictions:** Scale stage "6 wks" vs "ongoing" in one section (C3); 90-minute Discovery vs 20-minute qualification call (C4); duplicated registration blocks with county-name drift (C15).
- **Legal:** personal data collected via a required GDPR-consent checkbox with no readable policy (C13); no cookie/consent mechanism; no accessibility statement (W28). These are likely legal obligations independent of Google (Guide §12.2 item 7).
- **Technical:** the SPA shell means the AI-first positioning, once written, would not even be present in served HTML for crawlers and previews (E45); this converts a marketing weakness into an evidence-delivery weakness.

Net assessment. The current site is a high-quality artefact optimized for precisely the identity Google excludes. Its strengths (identity, craft, honesty of tone) transfer cleanly to a product-first site; its structure, messaging and conversion machinery do not. The redesign is therefore a re-foundation of content on a retained visual and legal base — not a facelift, and not a total rebuild.

STRATEGIC RECOMMENDATION

SECTION 5

5. Strategic Positioning Decision

5.1 The recommended category

Antutive should present itself as an AI-first product company: a product-first technology startup building Famant, its AI-powered family management and household coordination platform. The primary noun is *product company*; the qualifier *AI-first* is carried by Famant’s described mechanism and by a published, concrete plan to build on Gemini and Google’s agent platform — and is claimed only to the extent that plan is real. **STRATEGIC RECOMMENDATION**

This matches Google’s own three formulations of the target company — AI as core technology of the primary product; AI in the foundational structure and strategy; product built or planned on Gemini/GEAP (Research Guide §5) — while remaining truthful for a pre-launch company: the AI-first claim rests on the product’s architecture and dependency, which can be honestly described with status labels even before launch, because Google explicitly accepts a *plan* to use Gemini. **OFFICIAL GOOGLE REQUIREMENT**

5.2 Why the alternative categories are weaker

CANDIDATE CATEGORY	ASSESSMENT	VERDICT
"AI company" (unqualified)	Overclaims today: the site currently evidences no AI capability owned by Antutive, no shipped model usage, no published architecture (Website Analysis §10). Until an AI flow is demonstrable, the unqualified label invites the "bolt-on" characterisation Google warns against.	Reject for now
"AI-first startup" (as the whole identity)	Right direction but incomplete: it names the technology without naming what the company makes. Combined with "product company building Famant" it becomes concrete and defensible.	Use as qualifier
"SaaS company"	Famant is pre-launch with no live subscription service demonstrated; "SaaS maturity" is on the prohibited-unless-verified list in this engagement’s rules. Adopt naturally after launch.	Premature
"Technology company" / "software company"	True but weak: does nothing to answer the AI-first question and nothing to distinguish from the excluded dev-shop category the site currently resembles.	Too generic
"Product studio" / "innovation lab"	Studio and lab language is conventionally read as building for clients — the exact classification risk to eliminate (Guide §19.2: agency/consultancy positioning is an outright exclusion).	Reject
"Product portfolio company" / "parent company" / "platform company"	One product exists. The Website Analysis explicitly found no portfolio, holding structure or multiple ventures (§7 Table 7.1). Claiming a portfolio would be an invented fact.	Reject

5.3 Evidence supporting the choice — and evidence still missing

Supporting: Famant exists with a live external site and open waitlist (E51); its described capability set (assistant-class task management, document understanding with OCR, conflict detection, natural-language search) is genuinely AI-centred in concept — the research document judges the product concept "genuinely well matched to what Google describes as an AI-first startup" (Guide §16 summary); the company is newly incorporated, inside every age window; the domain/email foundation exists.

Missing and required before the positioning is fully load-bearing: confirmation of which Famant capabilities are actually built versus planned (every capability is "to be verified" per Guide §14); a documented Gemini/agent-platform architecture plan; at least real screenshots and one recorded end-to-end AI flow; resolution of the services-revenue question; and the funding position, which decides the tier narrative. None of these should be asserted on the website before verification. **STRATEGIC RECOMMENDATION**

5.4 How the positioning should evolve as Famant matures

STAGE	TRUTHFUL POSITIONING LANGUAGE	UNLOCKABLE CLAIMS
-------	-------------------------------	-------------------

Now (pre-launch, capabilities under development)	"AI-first product company building Famant" — with per-capability status labels and a planned-architecture page	Problem, mechanism design, planned Gemini usage, waitlist
Private testing / beta	"...now in private testing with real households"	Real screenshots, demo video, beta learnings (no invented counts)
Public launch	"AI-powered family platform" / SaaS language becomes accurate	Live product access, confirmed pricing, app-store links
Post-traction	Metrics-backed AI product company	User counts, retention, measured assistant quality — only when measured

SECTION 6

6. Brand Positioning Framework

Everything in this section is a **STRATEGIC RECOMMENDATION** expressed as message intent, not final copy. Statements marked **[VERIFY]** must be confirmed by the founder, engineering or legal before publication.

6.1 Who Antutive is

- A Swedish product company (ANTUTIVE AB, Gothenburg, founded 2026) that builds and operates its own AI-native software products.
- The maker and owner of Famant, its flagship product.
- A company whose product exists because household coordination is a problem of interpretation, prioritisation and follow-through — the class of work generative AI is suited to (Guide §21).
- An EU-based company that treats privacy and family-data care as design constraints. [VERIFY specific practices before claiming any as implemented]

6.2 Who Antutive is not

- Not a development agency, dev shop, consultancy, outsourcing provider or “tell us what to build” partner — and the website must stop describing engagement models, client segments and delivery pricing that say otherwise.
- Not an AI research lab, and not a claimant to proprietary models, benchmarks or certifications it does not have.
- Not a Google partner, not endorsed by Google, and not a program participant unless and until accepted — no such implication may appear anywhere.
- Not (yet) a launched SaaS business with users, revenue or traction — and it does not pretend to be.

6.3 Core positioning statement (message intent)

Antutive is an AI-first product company from Gothenburg, Sweden. We build Famant — an AI-powered platform that takes on a family’s coordination load: the schedules, tasks, documents and household spending that today live in five different places and one person’s head. The assistant is the product, not a feature. Famant is currently **[VERIFY: exact stage — e.g. “in development” / “in private testing”]**.

6.4 Brand promise

Famant gives the family’s invisible coordinator their time and headspace back — an assistant that understands the household’s context, proposes the next action, and acts only when a family member confirms. The promise deliberately encodes human confirmation, which is both a truthful description of the intended design and a responsible-AI signal for a household product (Guide §13 Responsible AI page, §14 item on describing what happens when the AI is wrong).

6.5 Mission

Message intent: remove the coordination burden that falls invisibly on one or two people in every household, by giving families a shared, intelligent layer over their schedules, tasks, documents and spending.

6.6 Vision

Message intent: a home where the administrative load is carried by software that understands the family — so the humans do the living. Vision language must stay outcome-focused and free of capability claims (no “fully autonomous” framing; the research guide explicitly warns that a claimed “finished autonomous family AI” is less convincing than one honest flow, Guide §14).

6.7 Long-term ambition

Build Famant into the trusted AI layer for household life in Europe and beyond, owned and operated by Antutive as durable intellectual property. Future products, if any, are not promised; the site should not imply a portfolio (Website Analysis §7 found none exists).

6.8 Value proposition

For households: one shared context instead of five fragmented tools, and an assistant that turns that context into proposed actions — scheduling that understands the family, documents that become events and reminders, spending that becomes insight. For the reviewer/investor audience: a focused team building a defensible AI-native product on a modern managed-AI architecture **[VERIFY architecture plan]**, from a verifiable Swedish company.

6.9 Company narrative

Antutive was founded in Gothenburg in 2026 to build its own products. Its founding team built Famant out of its own households' coordination pain — a narrative the current site already tells authentically in the Famant block (Website Analysis §8 origin story) and which should be promoted from a buried block to the company story. Engineering-services history, if any is retained in the story at all, appears only as heritage ("the team's engineering background") and never as an offer. **[VERIFY founder story facts]**

6.10 Product ownership narrative

Famant is built, owned and operated by Antutive. One consistent formulation everywhere: "Famant is Antutive's flagship product" — replacing today's three inconsistent framings ("Built by us", "BUILT IN-HOUSE AT ANTUTIVE", "proof that we use our own methods") and retiring the proof-of-method subordination entirely (E06). The famant.com footer already states "by Antutive"; antutive.com must reciprocate with a visible, linked product presence. Naming is standardised to **Famant** (title case), resolving C10; the antutive.com all-caps usage is retired. **CURRENT WEBSITE FINDING** **STRATEGIC RECOMMENDATION**

6.11 AI narrative

Structure the narrative exactly as the research guide's "why Famant is an AI-first product" argument (Guide §21): remove the AI and there is no product left — only another shared calendar and list app. The assistant is the interface; scheduling proposals are reasoning over family context, not rules; conflict detection requires understanding what commitments mean; documents become structured actions through multimodal understanding and OCR; the dashboard is assembled by prioritisation. Every capability named carries its status label. Voice is presented as an interface to the assistant, not as the category ("voice-first" demotes from identity to feature — resolving the mismatch where AI-substance features are labelled voice, §10).

6.12 Google Cloud alignment narrative

Message intent, publishable only after the technical plan is verified: "Famant is being built on Google Cloud, with Gemini models planned as the reasoning and understanding layer and Google's agent platform planned for orchestration, grounding and evaluation." Rules: label planned as planned; use the exact current Google product names verified on the day of publication (Guide Rev.2 note: GEAP as observed 28 July 2026; Vertex AI remains active and must not be called legacy); never imply partnership, endorsement or program acceptance; never present the alignment as the reason the product exists — the family problem is the reason, the stack is the means. **[VERIFY entire architecture plan before publishing]** **RESEARCH RECOMMENDATION**

SECTION 7

7. Famant Product Positioning

7.1 Primacy, navigation and page

- **Primary focus: yes.** Famant becomes the organising subject of antutive.com. The product is the evidence of AI-first status (Guide §12.2 item 4); there is no second product to dilute focus, and pretending otherwise is prohibited.
- **Top-level navigation item: yes** — “Famant” as the first item after the logo. Today no navigation path to the product exists at all (W5).
- **Dedicated page: yes** — /famant on antutive.com, built to the structure of Research Guide §14 (13 components: description, target users, problem, solution, modules with status labels, security, privacy, screenshots, demo, waitlist status, pricing-if-confirmed, roadmap, CTAs). This page carries the AI-first case in detail.
- **Homepage visibility:** Famant appears in the hero itself and in at least three of the first five homepage sections (see §11). The current allocation — one card in section four of eleven — inverts.

7.2 The Antutive–Famant relationship

One sentence, used identically everywhere: “*Famant is the flagship product of Antutive (ANTUTIVE AB), built and operated in Gothenburg, Sweden.*” On famant.com the existing “by Antutive” footer line is retained and linked back to antutive.com. The two sites keep distinct brand skins but must agree on: product name spelling (Famant), the one-line description, launch/status statements, and pricing. The current divergence — “Voice-First Home Operating System” on antutive.com versus mental-load family organiser on famant.com (C11) — is resolved in favour of the famant.com framing, which matches the research guide’s recommended problem narrative (coordination load, Guide §14.3) and avoids the unexplained “operating system” metaphor the Website Analysis flagged as undefined (§17). **STRATEGIC RECOMMENDATION**

7.3 Problem and target user presentation

Present the household problem as the research guide frames it: family coordination is fragmented across calendars, messages, paper documents, shared lists and separate financial tracking; the load falls on one or two people; the difficulty is interpretation and follow-through, not storage — which is precisely why an AI approach is justified (Guide §14.3, §21). Target users are named as household roles (parents, partners, multi-generation households) without claiming any existing user base. The origin story already on the site (calendars in three places, school forms in a drawer) is authentic and is retained as the founding narrative.

7.4 Capability structure with honest status labels

Capabilities are grouped into four user-value modules, each described as *mechanism* → *user outcome* → *status*. Suggested labels per the research guide: *Planned* / *Under development* / *In private testing* / *Released* (Guide §13 roadmap statuses; §14 treats every capability as unconfirmed until the product team labels it). The current site’s four feature areas map cleanly:

MODULE (CURRENT SITE NAME)	PRESENT AS	AI CONNECTION TO USER VALUE	STATUS LABEL
Unified Family Calendar	Family-aware scheduling: one shared view across Google, Outlook and Apple calendars [VERIFY integrations] , with conflict detection that explains overlaps and proposes resolutions	Reasoning over family context, not rule-based alarms	[from product team]
Agentic Task Management	The assistant turns requests — typed or spoken — into tasks, suggests the right family member, reminds in context	Instruction-following and delegation; confirmation before action	[from product team]
Document Vault	Document intelligence: uploaded school forms, invitations and receipts become structured, searchable information and proposed actions (event, reminder, expense) via OCR and natural-language understanding	Multimodal understanding turning paper into follow-through	[from product team]
Meal Planning Engine	Household planning intelligence: weekly plans, preference tracking, automatic grocery lists [VERIFY delivery-service integration before mentioning]	Recommendation grounded in the household’s own data	[from product team]

Expense/budgeting intelligence, AI-curated dashboard, personal vs shared workspaces and real-time collaboration — listed in the research guide's module table (§14.5) — are added only if the product team confirms they are part of the actual plan; described as insight, never as financial advice.

7.5 Maturity, access journey, visuals, proof

- **Maturity:** state the actual stage plainly on the Famant page and wherever pricing or launch is mentioned. The published “launches Q3 2026” claim is now in its own claimed quarter and must be corrected to fact: either launch is happening and demonstrable, or the page states honestly that access is not yet open (Guide §14.10). Pricing (0 / 79–129 SEK) stays only if it is a real, decided price; otherwise “pricing not yet announced” — the guide forbids placeholder tiers (§14.11).

RESEARCH RECOMMENDATION

- **Access journey:** primary CTA “Join the Famant waitlist”. The application-relevant journey must be legible on antutive.com itself; if the signup form remains hosted on famant.com, the hand-off is explicitly branded (“Continue to famant.com — Famant’s product site”) so the reviewer sees one company, two coordinated properties, rather than losing the trail (W5). No waitlist counts published unless accurate.
- **Visuals:** real interface captures of working screens only; fewer real screens beat polished mock-ups; any illustrative concept image is labelled as a design concept (Guide §14.8). The decorative ant mascot may remain as brand garnish but must stop being the only product media (W27).
- **Proof:** one recorded end-to-end demo of a genuine AI flow — the guide’s example: upload an invitation, confirm the proposed calendar event and reminder (§14.9). This single artefact outweighs every adjective on the site.

7.6 What must not be overstated

- No claim of active users, waitlist size, revenue, traction, launch completion, feature completeness, integrations not yet built, app-store presence, or “full AI capabilities” (the current three-word bullet E30 is retired and replaced by named, statused capabilities).
- No security or privacy claim beyond implemented controls; children’s-data care requires qualified privacy advice before any public beta (Guide §17 gap analysis, Critical).

7.7 Future products

Do not present any. A “Products” portfolio page is unnecessary and would today be padding around one real product; the navigation goes straight to Famant. If a second product genuinely reaches development later, reintroduce a portfolio layer then (Guide §13 permits a Products page “even if it contains one product”, but with a single product the flat structure is stronger and avoids implying breadth). **STRATEGIC RECOMMENDATION**

SECTION 8

8. AI-First Positioning Strategy

8.1 What “AI-first” must mean

For Antutive: AI-first is a structural statement — the company’s product does not exist without its AI layer, and the company’s strategy, hiring and architecture are organised around that dependency. This mirrors Google’s FAQ definition (AI in the foundational structure and strategy, not a bolt-on productivity layer). **OFFICIAL GOOGLE REQUIREMENT** **For Famant:** the assistant is the interface and the mechanism: scheduling, delegation, document understanding and the dashboard are all model-driven behaviours. The website’s test for every AI sentence: *does it describe a mechanism a technical reviewer could interrogate?* If it only decorates, cut it.

8.2 Where AI appears on the site

LOCATION	AI CONTENT	DEPTH
Homepage hero + positioning line	The AI-first product-company statement; one concrete assistant behaviour named	One line + one example
Homepage “how it works” section	Three to five AI capabilities with status labels (Guide §13 Home spec)	Capability cards
/famant	Full mechanism-by-mechanism story with statuses, demo, screenshots	Deep
/technology (AI & Technology page)	Intended Gemini model roles, agent orchestration, retrieval/grounding over family data, evaluation approach, guardrails	Technical
/about	Why the company is AI-first (structural argument), one paragraph	Narrative
Responsible AI section/page (post-launch priority)	Confirmation-before-action, limits, correction paths, family/minor considerations	Governance

8.3 Connecting AI to product outcomes — the mechanism pattern

Every capability is written as: *input* → *what the model does* → *what the family sees* → *confirmation step* → *status label*. Example intent (not final copy): “Photograph a birthday invitation. Famant reads it — date, time, venue, child — proposes the calendar event, gift reminder and RSVP task, and adds them when you confirm. *Status: under development, built on Gemini’s multimodal understanding [VERIFY].*” This is the guide’s prescription: one concrete behaviour end-to-end with the model named and status honest is more convincing to a technical reviewer than a claimed finished autonomous family AI (Guide §14). **RESEARCH RECOMMENDATION**

8.4 Technical depth, without generic AI marketing

- **Do:** name intended models and platform (Gemini; agent platform under its exact current Google name, verified on publication day); describe orchestration, grounding on family data, evaluation against a fixed test set, and cost-aware model routing (smaller models for routine requests) — all drawn from the guide’s recommended narrative (§21) and architecture plan (§18 Phase 5). Label each as planned until built.
- **Avoid:** “cutting-edge AI”, “revolutionary”, “full AI capabilities”, unexplained “smart/intelligent” adjectives, invented accuracy or benchmark figures (Guide §13 explicitly bars unmeasured benchmark or accuracy claims), proprietary-model implications, and “EU AI Act compliant” until scope is legally defined.
- **Thin-wrapper defence:** Google does not answer whether calling an external API suffices; its language centres on whether the product genuinely depends on AI (Guide §5, NOT SPECIFIED). **OFFICIAL CONDITION / LIMITATION** The defence is depth of dependency, honestly shown: family-context grounding, multi-step agent behaviour, evaluation discipline, confirmation design — not model-hosting claims Antutive cannot make.

8.5 Current AI claims: triage

CURRENT CLAIM (EVIDENCE)	VERDICT	ACTION
--------------------------	---------	--------

"AI Solutions, Human Impact" strapline (E18)	Too weak — unelaborated	Retire or replace with the positioning line; a strapline may return once content carries it
"Full AI capabilities" pricing bullet (E30)	Too weak — unspecified	Replace with named, statused capabilities
"Agentic Task Management", OCR, conflict detection, natural-language search (E29)	Right substance, unlabelled and unexplained	Keep, relabel as AI capabilities, add mechanism + status
"EU AI Act Ready" / "Compliant by design (August 2026)" (E37)	Requires evidence and defined scope	Remove until legal review defines and confirms scope
Data Delimited AI capability + "AI innovation... strategic consulting" card (E13, E14)	Wrong owner / consulting language	Remove from homepage; DD becomes a one-line About note (§16)
"AI-powered experiences" (E38)	Generic fragment	Superseded by the Famant mechanism story

8.6 Current vs planned vs unsupported

CATEGORY	CONTENTS	WEBSITE TREATMENT
Current verified AI capabilities	None confirmed by either source document. The Website Analysis found no demonstrated AI functionality; the Research Guide treats every Famant capability as "to be verified" (§14.5, §16)	Publish as current only what engineering demonstrates; screenshots/demo of real behaviour
Planned AI capabilities	Assistant dialogue, voice actions, task creation/delegation, family-aware scheduling, conflict detection, document intelligence, OCR, automated actions from documents, expense insight, AI reminders, curated dashboard (Guide §14.5)	Publish with Planned / Under development labels; connect to intended Gemini roles
Unsupported claims	"Full AI capabilities"; AI Act compliance; any accuracy, autonomy, model-ownership, or Google-relationship claim	Do not publish

Mention of specific technologies: **Gemini — yes, as planned foundation** (it is the qualifying technology Google names); **agent platform — yes, planned, exact current name verified at publication**; **OCR, voice, scheduling, automation — yes, as capability mechanisms with statuses**; specific model version numbers — only if the plan genuinely commits to them; competitor model names — no. **STRATEGIC RECOMMENDATION**

SECTION 9

9. Messaging Strategy

9.1 Homepage and hero messages

ELEMENT	MESSAGE INTENT (NOT FINAL COPY)
Homepage message	One reading, in seconds: Antutive is an AI-first product company; Famant is its product; the AI is the product's mechanism; the company is real, Swedish and honest about its stage; the action is joining the waitlist.
Hero message strategy	Lead with the problem-and-product, not the company: the family's coordination load, and the AI assistant Antutive is building to carry it. Famant named in the hero. Company identity ("from Antutive, Gothenburg") rides beneath.
Subheadline strategy	One concrete mechanism sentence (the invitation-to-calendar flow) plus one honesty sentence (current stage + waitlist). This pairs ambition with the status discipline the program terms reward.
Company description	"Antutive is an AI-first product company in Gothenburg, Sweden, building Famant — an AI-powered family management platform." Used identically in footer, About, and metadata (replacing the current services meta description, E46).
Product description	"Famant is an AI-powered family management and household coordination platform: one shared context for schedules, tasks, documents and household spending, with an assistant that proposes actions and acts on your confirmation." (Adapted from Guide §21.)
AI description	Mechanism language per §8.3; every capability stasured; planned Gemini foundation stated as planned.
Technology description	Managed-AI, cloud-native architecture on Google Cloud [VERIFY]; evaluation and cost-aware model routing; no stack name-dropping beyond what is real.
Mission/vision language	Per §6.5–6.6; outcome-first, no autonomy overclaim.
CTA language	Primary: "Join the Famant waitlist". Secondary: "See how Famant works" / "Watch the demo" (once it exists) / "Read about our technology". Contact remains for company enquiries but stops being the site's single funnel (today 24 of 33 CTAs sell a build, §14).

9.2 Voice and style

- **Tone of voice:** keep the existing plain, confident, lightly warm voice (a documented strength, §11) — redirected from selling builds to explaining a product. Honesty devices ("here's what works today, here's what's coming") become the signature.
- **Communication style:** concrete scenarios over abstractions; families and reviewers both understand "the school form becomes a calendar event".
- **Language style:** British English (already consistent site-wide); short declaratives; no filler.
- **Technical depth:** two-layer — consumer-legible on Home and /famant, reviewer-grade on /technology. Never deeper than verified truth.

9.3 Vocabulary

EMPHASIZE	AVOID
Famant; AI-first product company; assistant; family context; proposes / confirms; document understanding; OCR; conflict detection; under development / in private testing (honest statuses); built and operated by Antutive; Gothenburg, Sweden; privacy by design [only as implemented]; built on Google Cloud / Gemini [only once the plan is verified, labelled planned]	Agency-category vocabulary: engagement models, retainer, fixed-scope, milestone payments, deliverables, client, dev team on demand, discovery session, build-for-you, IP transfer/handover; hype vocabulary: revolutionary, cutting-edge, full AI capabilities, autonomous; unverified compliance vocabulary: GDPR compliant (as a blanket badge), EU AI Act compliant; unverifiable statistics: 3x faster, 24h SLA
PHRASES THAT STRENGTHEN CREDIBILITY	PHRASES THAT WEAKEN CREDIBILITY
"Here's exactly what Famant can do today — and what's coming"; "the assistant acts only when you confirm"; "ANTUTIVE AB, org.nr 559576-7228"; "we'll publish results when we've measured them"; "planned on Gemini — here's the intended role of each model"	"Every product we've built..." (implied portfolio, C19); "trusted by" framing without clients; "compliant by design" without a policy; "senior engineers on every project" with nobody named; any sentence implying Google endorsement or program membership

9.4 Service-oriented phrases: disposition

The recurring service phrases documented in Website Analysis §11 are dispositioned in §15–16 of this document. In summary: the ownership promise (“you own everything we build”) is retired as a company message — it is a client-services promise with no meaning for a product company; “Discovery” as a sales entry point is removed; EU/GDPR vocabulary survives only attached to specific, implemented, documented practices; the craftsman narrative (“built carefully, transparently, to last”) survives, re-aimed at how Antutive builds its product. Nothing is replaced with generic startup language — each replacement is a Famant-specific, mechanism-specific statement. **STRATEGIC RECOMMENDATION**

SECTION 10

10. Website Information Architecture

10.1 Recommended structure

Everything in this section is a **STRATEGIC RECOMMENDATION** built on the research guide’s recommended site map (Guide §13, itself a RECOMMENDATION — Google mandates no structure). The architecture stays flat and small: a focused six-to-seven-page site is more credible for a one-product company than a padded one.

Main navigation: Famant · Technology · About · Contact — with the primary button “Join the waitlist”. (Optional fifth item post-launch: Updates.) The current navigation (How We Work · Custom Build · Products · About · Let’s Talk) is retired in full.

PAGE	PRIORITY	WHY IT IS NEEDED / AUDIENCE / EVIDENCE IT MUST PROVIDE	CRITICAL BEFORE APPLYING?
Home (/)	Critical	Establishes in one screen that Antutive is an AI-first product company and Famant its AI-native product (Guide §13 Home). Audience: everyone, led by the Google reviewer and prospective users. Evidence: positioning line, problem, 3–5 statused AI capabilities, product visual, legal identity, working legal links.	Yes (Guide §12.2 items 3–4)
/famant	Critical	Carries the full AI-first case per Guide §14. Audience: users, reviewer, investors. Evidence: mechanisms, status labels, screenshots, demo, accurate stage, waitlist.	Yes (Guide §12.2 item 4; Phase 3 item 4)
/technology	High	Concentrates the Gemini and agent-platform evidence: intended model roles, orchestration, grounding, evaluation, guardrails (Guide §13 AI & Technology). Audience: technical reviewer. Evidence: named Google services with planned labels; no unmeasured benchmarks.	Recommended, not required (Guide §12.2 note); build before applying if at all possible
/about	Critical	Legal identity, founding, mission, product-company framing, founder(s), one-line Data Delimited note. Audience: reviewer, verifiers. Evidence: registry facts, founder names with LinkedIn.	Yes (company/contact info, Guide §12.2 item 6)
/contact	High	Route for Google follow-up and general enquiries. Form options rewritten: product/waitlist question, press, partnership, general — the seven build-service options are removed (E43).	Yes (contact route)
/privacy, /terms, /cookies	Critical	Legal obligation in substance (personal data is collected) and a Guide §12.2 essential (item 7). Real URLs, linked from footer and consent checkbox, with effective dates, legally reviewed.	Yes
/updates (or /roadmap)	Medium	Dated progress notes and themed roadmap with statuses — momentum without overclaiming (Guide §13 Roadmap/Updates). Can follow the application.	No
Responsible AI + Security & Privacy pages	High (post-launch critical)	Family product handling household and possibly children’s data (Guide §13). Publish only implemented controls; requires legal/engineering input first.	No (explicitly deferrable, Guide §12.2)
/careers	Low	Only with real openings or an expression-of-interest route; never fake roles.	No

10.2 Footer, journeys, and current-page disposition

Footer: column 1 — logo + the new one-line company description; column 2 — Product (Famant, Technology, Waitlist); column 3 — Company (About, Contact, Updates); column 4 — Legal (working Privacy, Terms, Cookies links); bottom bar — “© ANTUTIVE AB · Gothenburg, Sweden · Org.nr 559576-7228” plus a LinkedIn link once the profile exists (W21). **Product-access journey:** any page → Famant → waitlist in ≤2 clicks. **Application-review journey:** Home → Famant → Technology → About → legal pages, with no dead ends and no off-domain surprises.

CURRENT PAGE	DISPOSITION	NOTE
--------------	-------------	------

/ (Homepage)	Keep and rewrite	New flow per §11; retain design system and legal strip
/growth-marketing (How We Work)	Remove and redirect	Slug is template residue (C5). Redirect to /about. Process-quality material may inform an “how we build” paragraph on About — as practice, not offer
/custom-platform (Custom Build)	Remove and redirect	Redirect to /famant. Pure services content; nothing survives publicly
/products	Convert	Becomes /famant (301 from /products). Famant block content is the seed; services categories, tiers, roadmap and partnership block are removed
/about	Keep and rewrite	Registry facts retained; mission rewritten product-first; founder added; DD reduced to one defined line; AI Act claim removed pending legal review
/contact	Keep and rewrite	Form options replaced; four-step sales process removed; privacy link made real
(non-existent legal footer items)	Add for real	W1/C12 resolved

SECTION 11

11. Homepage Strategy

Recommended flow in exact order. Every section answers the reviewer's seconds-level questions: what Antutive is, what it owns, what Famant is, why AI is foundational, what stage it is at, why it is credible, and what to do next. All rows are

STRATEGIC RECOMMENDATION implementing Guide §13 (Home) unless noted; "evidence required" means what must be true and verified before the section publishes.

SECTION	PURPOSE / PRIMARY MESSAGE	KEY CONTENT	EVIDENCE REQUIRED	EMPHASIS & TRUST	VISUAL ROLE / CTA	VISITOR TAKEAWAY	PRIORITY
1. Header	Identity + product access	Logo; nav: Famant, Technology, About, Contact; button "Join the waitlist"	None	Product-first nav is itself the signal	Clean persistent bar / waitlist	"This company has a product"	Crit
2. Hero	The AI-first product-company statement	Positioning line naming Famant; one-sentence problem; one mechanism example; honest stage line; "from Antutive · Gothenburg"	Stage statement verified by product team	Product 100%; AI explicit; honesty as trust	Real product screen (once real) / "Join the waitlist" + "See how it works"	What Antutive is, what Famant is, in ≤5s	Crit
3. The problem	Why this product must exist	The household coordination load: fragmented calendars, paper documents, invisible labour (Guide §14.3 framing)	None (problem statement, not claim)	Product; emotional truth as trust	Simple illustration / none	"This is a real problem I recognise"	High
4. How the AI works	AI as mechanism, not adjective	3–5 capability cards: scheduling & conflict detection; task creation/delegation; document intelligence & OCR; each with mechanism sentence + status label	Status labels from engineering; nothing unbuilt shown as built	AI foundational; status labels are the trust device	Capability cards / "Explore Famant"	"AI is the product's engine, and they're honest about status"	Crit
5. Product proof	The product is real	Real screenshots; demo video once recorded; explicit stage statement + waitlist	Working screens; recorded genuine flow (Guide §14.8–9)	Product; visual proof is the strongest trust signal available pre-traction	Screenshot band / "Watch the demo", "Join the waitlist"	"I have seen the software"	High
6. Technology	Serious, planned architecture	Two-to-three sentences: built on Google Cloud, Gemini planned as reasoning layer, agent platform planned for orchestration — all labelled planned [VERIFY]; link to /technology	Documented architecture plan from technical lead	AI + credibility; no endorsement implication	Small architecture motif / "Read about our technology"	"A concrete, plausible Google-stack plan exists"	High
7. Company strip	Verifiable identity	ANTUTIVE AB · org.nr 559576-7228 · Gothenburg · founded 2026; founder name + LinkedIn	Registry facts; founder consent	Trust: registry-checkable + human	Compact strip with founder photo / "About Antutive"	"Real company, real person"	High
8. Final CTA	Convert	Waitlist invitation in the site's honest voice; secondary contact link	Working waitlist with confirmation (Guide §12.3)	Product	Card / "Join the Famant waitlist"	Clear next action	Crit

9. Footer	Navigation + legal	Per §10.2, with working legal links	Legal pages exist	Trust closure	Standard / legal links	"Finished, compliant site"	Crit
-----------	--------------------	-------------------------------------	-------------------	---------------	------------------------	----------------------------	------

Removed from today's homepage: credential marquee (self-referential, E04), pain matrix (client-problem qualification, E07), "Two Kinds of Builds", "Road to Live" timeline, "Straight Answers" statistic counters (3x/24h, W6), and the Data Delimited "Bigger Picture" section (W9/W10) — dispositions detailed in §15–16. The four-stat bar disappears with them; the org-number strip in section 7 carries the surviving verifiable facts.

SECTION 12

12. Individual Page Strategy

PAGE	PURPOSE / AUDIENCE / GOAL	REQUIRED SECTIONS & EVIDENCE	TRUST, AI AND PRODUCT ELEMENTS; CTAS	CLAIMS TO AVOID; DEPENDENCIES	PRIORITY
Home	Instant category + product understanding; all audiences; goal: waitlist + reviewer comprehension	Per §11. Evidence: verified stage, statuses, screenshots, legal links	Registry strip, founder, status labels; AI mechanism cards; CTA: waitlist	Avoid: users/traction/funding/endorsement claims. Depends: positioning sign-off, product statuses	Crit
/famant	Carry the AI-first case; users + reviewer; goal: waitlist and belief	Guide §14's 13 components: description; target users; problem; solution; modules with status labels; security (implemented only); privacy summary; screenshots; demo; accurate access status; pricing only if confirmed; themed roadmap; CTAs	Demo is the anchor trust element; every capability = mechanism + status; CTAs: waitlist (primary), demo, technology	Avoid: feature completeness, integrations not built, invented waitlist/user counts, placeholder pricing. Depends: engineering status audit, media capture, launch-statement correction	Crit
/technology	AI & technology depth; technical reviewer; goal: make the Gemini-foundation plan concrete	Intended Gemini model roles per capability; agent orchestration + tool calling into Famant services; retrieval/grounding on family data; evaluation approach; guardrails & confirmation design; Google Cloud service plan (Cloud Run, Cloud SQL, Cloud Storage, Firebase, observability) labelled planned [VERIFY] (Guide §13, §18 Phase 5, §21)	Architecture diagram; named Google services; honest planned labels are the trust device; CTA: join waitlist / contact	Avoid: fine-tuned proprietary models, unmeasured benchmarks, production/uptime claims, certifications (Guide §13). Depends: technical lead's documented plan; Google product-name verification	High
/about	Company vision + identity; reviewer, investors, verifiers	Legal identity block (retained); founding story; mission (product-first rewrite); why AI-first (structural argument); founder profile(s) with LinkedIn; one defined Data Delimited sentence [VERIFY relationship wording]; contact	Registry facts + human faces; CTA: Famant, Contact	Avoid: "EU AI Act compliant" (until reviewed), team-size implication, history that did not happen (Guide §13 About). Depends: founder consent and facts	Crit
Team (in About or /team)	Verifiable humans; reviewer + hiring	Real names, roles, short factual bios, photos, LinkedIn; no intended hires as staff (Guide §13 Team)	External corroboration is the point	Avoid: advisers/investors without consent. Depends: consent	High
/contact	Follow-up route; Google, users, press	Domain email; rewritten form (product question / press / partnership / general); GDPR consent linking the real policy; response expectation	Working form + real policy link; CTA: send	Avoid: SLA promises not operated (current 24h/48h claims removed unless contractual). Depends: privacy policy live	High

/privacy, /terms, /cookies	Legal compliance; everyone	Lawful basis, data categories, retention, processors incl. Google Cloud once real, subject rights, model-data flows once AI processing exists; service terms; cookie consent if tracking added (Guide §12.3, §15 items 43–47)	Effective dates; version history	Avoid: compliance-framework claims not implemented. Depends: legal review (Critical, Guide §17)	Crit
/updates	Momentum; reviewer + waitlist members	Dated short updates; themed roadmap with statuses, no committed dates unless certain (Guide §13)	Cadence is the trust signal	Avoid: dates that are hopes. Depends: roadmap agreed	Med
Responsible AI / Security & Privacy	Family-data trust; parents + reviewer	Confirmation-before-action, limits, correction paths, minors considerations; encryption, access control, tenant separation — implemented controls only (Guide §13)	Plain-language commitments	Avoid: audits/certifications not held. Depends: controls implemented and documented	High (post- launch critical)
/careers	Growth signal; candidates	Real openings or expression- of-interest only	Honest hiring stage	Avoid: fake roles implying scale. Depends: real hiring intent	Low
Existing service pages	—	Removed and redirected per §10.2 and §19	—	Retention risk: continued indexing as an agency (Guide §19.2)	Crit

SECTION 13

13. Credibility and Evidence Strategy

Every credibility signal worth considering, with its current existence per the Website Analysis and what must be true before publication. No manufactured credibility: signals that cannot be truthfully populated stay off the site. **STRATEGIC RECOMMENDATION** throughout; per-signal sourcing noted.

SIGNAL	WHY IT MATTERS	EXISTS NOW?	PUBLISHABLE NOW?	EVIDENCE REQUIRED	WHERE IT APPEARS	PRIORITY
Legal company identity & registration details	Google-side identity verification; reviewer's first check (Guide §12.3)	Yes (E36)	Yes	Registry confirmation of published facts	About, footer, company strip	Crit
Founding information	Company-age criterion is official	Yes ("2026")	Yes	Certificate of incorporation on file	About	High
Founder information / team members	Site currently names no human (W3); verifiability recommendation (Guide §12.3)	No	Yes, once consented	Real names, roles, LinkedIn	About/Team, homepage strip	High
Product ownership statement	Famant is the AI-first evidence	Partial (E28, E51)	Yes	Consistent naming + reciprocal links	Site-wide	Crit
Product screenshots	Fastest proof software exists (Guide §12.3 High)	No (zero on site, E49)	Only of working screens	Working build; no mock-ups as product	Home, /famant	High
Working demo	"Strongest available evidence of AI-first status" (Guide §16)	No	After recording a genuine flow	One end-to-end AI flow, real	/famant, Home	High
Waitlist	Commercial intent + verifiable interest (Guide §12.3)	Yes, on famant.com	Yes	Working form + confirmation; branded hand-off	Every page CTA	Med
Roadmap / launch stage	Direction without overclaim	Only "Q3 2026" (stale)	After correction	Verified stage; themed statuses	/famant, /updates	High
Architecture overview / AI capabilities	Makes the Gemini-foundation claim credible (Guide §11.2)	No	After plan documented	Technical lead's architecture doc	/technology	High
Security practices / data handling	Family documents demand it	No (asserted only)	Implemented controls only	Controls implemented + documented	Security page	High
Privacy Policy / Terms / GDPR info	Legal necessity; consent currently references nothing (C13)	No (W1)	After legal review	Reviewed documents with dates	/privacy, /terms, footer	Crit
User feedback / beta results / product metrics / case studies	Powerful later; fabrication fatal	No	No	Real measured data from real use	Post-beta	Low now
Partners / investors / press / awards	Third-party validation	No	No	Real, consented, verifiable events only	When real	Low now
Technical blog / dev updates	Demonstrates AI seriousness (Guide §12.3 Medium)	No (W20)	Yes, when written	2–4 substantive posts	/updates or blog	Med
GitHub / engineering proof	Optional corroboration	No	Optional	Only if real activity exists	Footer	Low

App-store presence	Distribution proof	No	No (pre-launch)	Published apps	Post-launch	Low now
Domain-matching company email	Official requirement in the application chain	Yes (E41)	Yes	Applicant mailbox on antutive.com	Contact + application	Crit
Google Cloud billing readiness	Official prerequisite (18-char ID, domain match)	Unknown	n/a (not a website item)	Account created from @antutive.com; ID recorded	Not on website	Crit
Social presence (LinkedIn)	Corroborates activity (W21)	No links on site	Once profiles exist	Company + founder profiles	Footer, Team	Med

SECTION 14

14. Google Cloud and Gemini Alignment

14.1 Existing verified alignment

None. Neither source document confirms any current Google Cloud usage, Gemini integration, billing account, or credit history. The website names no cloud provider at all (Website Analysis §17 Technology). Nothing may therefore be published as current usage. **CURRENT WEBSITE FINDING**

14.2 Planned alignment (publishable once verified)

The research guide’s recommended architecture (Guide §18 Phase 5, §21) is the template the technical lead must confirm or amend before any of it is published:

- **Gemini models:** assistant dialogue and instruction-following; extraction of tasks, dates, amounts, participants from documents and messages; scheduling reasoning and conflict explanation; dashboard summarisation; multimodal understanding of photographed receipts and invitations. Cost-aware routing: smaller Gemini models for routine requests.
- **Agent platform (exact current Google name verified on publication day):** agent definition and orchestration; tool/function calling into Famant’s services; grounding and retrieval over the family’s own data; evaluation against a fixed test set; versioned deployment; production monitoring of model behaviour.
- **Google Cloud services:** Cloud Run (API + async document workers), Cloud SQL (household relational model), Cloud Storage (documents, retention aligned to the privacy policy), Firebase (auth, real-time collaboration — explicitly credit-covered spend), observability, security services; separate dev/staging/production projects under one billing account.

Standardising on Google models is also economically rational and may be said plainly: program credits cover Google models such as Gemini and Gemma, while third-party models fall outside the regular allocation (a separate conditional partner-model credit of up to US\$10,000 in Model Garden may exist for qualifying Scale/Scale AI startups and must not be assumed).

OFFICIAL CONDITION / LIMITATION

14.3 Recommended technical direction, and presentation rules

- Present the stack on /technology as the means to the family outcome — never as an advertisement for Google. No Google logo walls, no partner badges, no “in partnership with” phrasing, no program references. Implying endorsement is both prohibited by this engagement’s rules and dangerous under the false-information condition. **STRATEGIC RECOMMENDATION**
- Use planned/intended labels until each element is live; switch labels as reality changes; keep the terminology synchronised with Google’s current product names (the guide’s Rev.2 correction: GEAP observed on the startup pages; Vertex AI active, not legacy). **RESEARCH RECOMMENDATION**
- Modern-engineering signals worth stating once true: cloud-native stateless services, environment separation, budget/quota discipline, evaluation-driven AI quality, monitoring before launch.

14.4 Claims that must wait for implementation — and evidence required

CLAIM	WAIT UNTIL	EVIDENCE REQUIRED BEFORE PUBLICATION
“Famant runs on Google Cloud” (present tense)	Deployment exists	Live environments on GCP
“Famant uses Gemini” (present tense)	Integration shipped in a real flow	Demonstrable model-driven behaviour
“Production-grade / scalable infrastructure”	Production exists with monitoring	Architecture doc + operating evidence
Security controls (encryption, tenant separation)	Implemented	Security documentation of implemented controls only (Guide §13)
Data-residency statements	Region decisions made and availability confirmed per service	Region plan confirmed (Guide §18 Phase 5, EU residency row)

Any mention of the startup program, credits, or Google relationship	Never on the website (confidentiality obligations apply to non-public program aspects; acceptance may not be claimed)	—
---	---	---

14.5 What website positioning cannot solve

Institutional-funding eligibility for Scale/AI; the 18-character billing account and three-way domain alignment (operational setup, not content); prior-credit history under the caps; the incorporation certificate; country discretion; and the truthful answer to the services-revenue question. The website’s job is to be consistent with those facts, not to substitute for them (Guide §16, §24).

STRATEGIC RECOMMENDATION

SECTION 15

15. Product Versus Services Transformation

15.1 The decision the documents support

Recommendation: remove consulting and development services from Antutive’s public positioning entirely. Do not retain them as a visible secondary capability. Basis: Google’s exclusion of dev shops, consultancies and agencies is a mandatory exclusion, not a weighting (**OFFICIAL GOOGLE REQUIREMENT** Guide §9, §19.1); the research guide’s gap analysis instructs Antutive to “confirm Antutive earns no services revenue and that no public material reads as services” (§17) and its risk analysis lists “agency or consultancy positioning” as producing outright exclusion (§19.3); and the Website Analysis shows service content is not a fringe of the current site but its body (21 of 25 classified signals, §9). A “secondary services” page would preserve exactly the ambiguity the guide says invites the wrong classification (§11.2). **STRATEGIC RECOMMENDATION**

The honest boundary of this recommendation. This is a positioning decision; the underlying business-model decision belongs to the founder (Guide §20 Q6: does Antutive earn, or intend to earn, services revenue?). If material services revenue continues, Antutive faces a genuine company-level classification question that the website must not be used to conceal — hiding an active services business while applying would collide with the false-information voiding condition. The truthful paths are: (a) wind down or corporately separate services and apply as the product company; or (b) continue services and accept the eligibility risk, disclosed honestly if asked. This document recommends (a) as the only path consistent with the program and with the company’s stated product ambition. **STRATEGIC RECOMMENDATION**

15.2 Disposition of service content

DISPOSITION	CONTENT
Remove (public web)	How We Work and Custom Build pages; engagement models (fixed-scope/retainer/co-build/MVP); three client pricing tiers; client delivery roadmap; pain matrix; client segments; “Build Together” partnership block; comparison-vs-agencies block; all “Discovery” sales CTAs; the seven service form options; hero build-for-hire proposition; “We ship software. You keep everything.”; credential marquee.
Relocate (private)	Anything commercially needed for existing client relationships moves to private documents (proposals, contracts) — not the public web.
Retain, reframed	Process-quality culture (“how we build”: testing, documentation, monitoring) as one About paragraph about how Antutive builds Famant; the honest, human tone; EU/Swedish identity; design system.
Expand (product side)	Everything in §7–8, §11–12: Famant page, mechanism content, technology page, proof media, waitlist journey.

15.3 Conversion, navigation and messaging changes

- **CTAs:** from “book a Discovery call” (24 of 33 CTAs today, §14) to “Join the Famant waitlist” as the site-wide primary; Contact demoted to a support route.
- **Navigation:** services items replaced per §10; redirects preserve link equity while removing the agency surface (301: /growth-marketing→/about, /custom-platform→/famant, /products→/famant).
- **Homepage balance:** from 1 product section in 11 to a fully product-led flow (§11).
- **Messaging:** ownership-transfer and speed-of-delivery promises retired; the “craftsman” narrative survives aimed at the product.

15.4 Business-model implications and risks of keeping service messaging

Implications: the public revenue story becomes Famant’s (waitlist → subscriptions once launched; the currently published consumer tiers stand only if confirmed). Inbound build-for-hire leads will decline by design. Risks of keeping service messaging: outright program exclusion (§19.1); reviewer classification against the applicant’s own declared category; SEO residue continuing to present Antutive as an agency (mitigated by redirects and re-indexing); and internal strategic drift — a site that sells two identities executes neither, which is the current site’s documented condition (§20 “mixture of identities”). **CURRENT WEBSITE FINDING**

SECTION 16

16. Things to Remove, Reduce, Retain and Add

16.1 Remove

ITEM	REASON	SOURCE	PRIORITY	IMPLEMENTATION NOTE
Both service pages and all engagement/pricing/segment/partnership blocks	Excluded-category positioning	Guide §9; WA §9	Crit	301 redirects per §10.2; remove from sitemap
"3x faster delivery", "24h/48h SLA" statistic bars and counters	Unsupported quantified claims; voiding-condition exposure	W6, C18; Guide §19.1	Crit	Site-wide sweep; five of six heroes carry the bar
"Every product we've built...", "Most of what we build is for clients"	Implied portfolio never shown	C19, E27	Crit	Copy audit
Data Delimited "Bigger Picture" homepage section + "AI innovation, growth automation, digital transformation, strategic consulting" card	Consulting language; AI story owned by another company; sends AI visitors off-site	C2, W9, W10	Crit	Replaced by one defined line on About [VERIFY wording with founder]
"EU AI Act Ready" / "Compliant by design (August 2026)"	Undefined scope; no described AI system; legal claim without review	E37; WA §22	Crit	May return only with legally defined scope
Blanket "GDPR compliant" badges (13+ instances)	Claimed while no privacy policy exists	W1, C12–C13	Crit	Replace with specific practices once legal pages live
"Senior engineers on every project", "senior engineering team on demand"	Unverifiable; nobody named	WA §22	High	Superseded by real team page
Non-functional footer legal items	Styled-as-links dead text	C12, E16	Crit	Replaced by real pages
"FAMANT" all-caps + "Voice-First Home Operating System" framing	Cross-property inconsistency; undefined metaphor; voice mislabels the AI substance	C10, C11; WA §10	High	Standardise "Famant" + agreed one-liner on both domains

16.2 Reduce or reframe

ITEM	REASON	SOURCE	PRIORITY	IMPLEMENTATION NOTE
Data Delimited relationship	Real and reciprocated; belongs as fact, not narrative	E52	High	One About sentence with the verified relationship term
EU/Swedish jurisdiction emphasis	Genuine asset, currently over-repeated (15+ IP-ownership/GDPR repetitions pattern)	C16	Med	Once per page maximum; attach to specifics
"AI Solutions, Human Impact" strapline	Unelaborated brand claim	C1, E18	High	Retire or re-earn after content carries it
Contact page process detail	Useful reassurance, currently sales-shaped	E42	Med	Keep response expectation; drop the 4-step sales funnel
Decorative ant mascot video	Charming, but currently the only product media	W27, E33	Low	Keep as garnish once real screenshots exist

16.3 Retain

ITEM	REASON	SOURCE	PRIORITY	IMPLEMENTATION NOTE
Company registration block and footer legal line	Most verifiable claims on the site	E10, E36	Crit	Single canonical version (fix VGR drift, C15)
Design system, typography, motion restraint	Documented execution quality	WA §12, §18	Med	Reuse for product-first content
Tone of voice and copywriting quality	Distinctive, human, credible	WA §11	High	Same voice, new subject
Famant origin story	Authentic founding narrative	WA §8	Med	Promote to About/company story
Domain email + contact clarity	Requirement-adjacent and trust-positive	E41	Crit	Keep prominent
famant.com and its reciprocal ownership line	External corroboration	E51	High	Align naming/status/pricing statements

16.4 Add

ITEM	REASON	SOURCE	PRIORITY	IMPLEMENTATION NOTE
Working Privacy Policy, Terms, cookie handling	Legal necessity + Guide essential #7	Guide §12.2; W1	Crit	Legal review first; effective dates
Homepage AI-first positioning statement	Guide essential #3	Guide §12.2	Crit	§9.1 language
/famant product page with status labels	Guide essential #4–5; carries AI-first case	Guide §14	Crit	§7 and §12 spec
/technology page (Gemini + agent platform + GCP plan)	Concentrates qualifying-platform evidence	Guide §13	High	Publish only the verified plan; planned labels
Founder/team page content	Zero human presence today	W3; Guide §12.3	High	Consent + LinkedIn
Real screenshots + one demo video	Strongest AI-first evidence	Guide §16	High	Working screens only
Per-page metadata, og:image, sitemap.xml, robots.txt, designed 404, prerender/SSR	Technical credibility + crawler-visible content	W8, W13; E45–E48	High	Fix slugs with redirects (C5–C6)
Waitlist CTA with confirmation on antutive.com journey	Product conversion on the company domain	Guide §12.3; W5	Med	Branded hand-off if form stays on famant.com
LinkedIn company + founder profiles linked	External corroboration	W21	Med	Footer + team entries
Updates/roadmap section	Momentum, honestly	Guide §13	Med	Statuses, no uncertain dates
Responsible AI + Security pages	Family/children's data trust	Guide §13, §17	High	After controls/design decisions exist

SECTION 17

17. Visitor Journey

17.1 The Google reviewer

MOMENT	WHAT THE REVIEWER SHOULD CONCLUDE
After 5 seconds	"Antutive is an AI-first product company. Its product is Famant, an AI-powered family platform. This is not an agency." (Hero positioning line + product-first navigation.)
After 30 seconds	"The problem is real, the AI is the mechanism, and they label what's built versus planned. There's a screenshot; the company is Swedish and registry-verifiable."
After 2 minutes	"The Famant page shows one genuine end-to-end AI flow; the technology page names Gemini and the agent platform with intended roles, honestly labelled planned; a founder exists on LinkedIn; the legal pages work; nothing smells inflated."
Before leaving	"This is a credible early-stage AI-first product startup whose declared category matches its public material. The AI-first claim in the application is supported, not contradicted, by the website." The reviewer never encounters: engagement models, client segments, service pricing, unverifiable statistics, or an implied Google relationship.

17.2 Other audiences

AUDIENCE	JOURNEY AND INTENDED OUTCOME
Product user (family)	Home → recognises the coordination problem → /famant → sees what works today and what's coming → joins the waitlist (branded hand-off to famant.com if applicable). Outcome: signup with correct expectations.
Investor	Home → /famant (product depth) → /technology (defensibility) → About (team, identity). Outcome: "focused team, honest stage, real IP being built" — and no invented traction to unwind in diligence.
Potential partner	Home → About → Contact (partnership option in the rewritten form). Outcome: understands Antutive builds its own product; no co-build engagement expectations created.
Potential employee	Home → About/Team → Careers (or expression of interest). Outcome: understands mission, stage and honesty culture.
Existing service prospect	No public journey remains by design. Legacy URLs redirect to product pages; existing clients are handled privately (\$15.2). If any service work continues contractually, it is invisible to the public site.

SECTION 18

18. Claims and Evidence Readiness Matrix

Status values: **PUBLISH NOW** · **PUBLISH WITH QUALIFICATION** · **VERIFY / IMPLEMENT BEFORE PUBLISHING** · **DO NOT PUBLISH**. Risk = damage if published wrongly (application voiding, legal exposure, credibility loss).

PROPOSED WEBSITE CLAIM	SOURCE CLASSIFICATION	CAN IT BE PUBLISHED NOW?	EXISTING EVIDENCE	MISSING EVIDENCE	REQUIRED ACTION	RISK
"Antutive is an AI-first product company"	SR	WITH QUALIFICATION	Famant concept is AI-centred (Guide §16)	Built-vs-planned confirmation; services-revenue answer	Founder sign-off; pair with statused capabilities	High
"Famant is Antutive's flagship product, built and owned by Antutive"	CWF	PUBLISH NOW	"Built in-house" on site; famant.com reciprocates (E28, E51)	—	Standardise naming	Low
Famant capability list (assistant, scheduling, conflict detection, tasks, document intelligence, OCR)	RDR	WITH QUALIFICATION	Described in concept on both properties	Per-capability build status	Engineering status audit; label every capability	Crit if unlabelled
Voice-first functionality (Swedish + English voice commands)	CWF	VERIFY BEFORE PUBLISHING	Claimed on current site	Working voice pipeline evidence	Demote to feature; status label; verify languages	High
Agentic functionality (assistant executes on confirmation)	RDR	VERIFY BEFORE PUBLISHING	Concept only	A demonstrable agent flow	Build/demo one genuine flow; describe confirmation design	High
"Famant runs on Google Cloud / uses Gemini" (present tense)	SR	DO NOT PUBLISH	None	Actual deployment/integration	Implement first; until then use planned language	Crit
"Famant is planned to be built on Gemini and Google's agent platform"	OGR-aligned	VERIFY BEFORE PUBLISHING	None yet	Documented architecture plan; current product naming	Technical lead documents plan; then publish with planned labels	Med
Product maturity / launch status ("launches Q3 2026")	CWF	VERIFY BEFORE PUBLISHING	Claimed; quarter now current	Actual launch position	Correct to fact; honest access statement	Crit

Active users / waitlist size / revenue / traction	—	DO NOT PUBLISH	None	Real measured numbers	Publish only when real and accurate	Crit
Scalability ("production-grade, scales without limits")	CWF (current absolute claim)	DO NOT PUBLISH	None	Operating production system	Remove absolutes; describe planned architecture instead	High
Security controls (encryption, tenant separation)	RDR	IMPLEMENT BEFORE PUBLISHING	None documented	Implemented, documented controls	Implement; publish only what exists	High
GDPR compliance / data privacy statements	CWF (currently blanket)	IMPLEMENT BEFORE PUBLISHING	Consent checkbox only (C13)	Privacy policy, DPA posture, legal review	Legal review; replace badges with specifics	Crit
Company capabilities ("we can build scalable digital products")	SR	WITH QUALIFICATION	Site execution quality; live product site	Shipped product evidence	Show, don't assert: screenshots/demo carry this	Med
Delivery speed ("3x faster") / support commitments ("24h SLA")	CWF	DO NOT PUBLISH	None (W6)	Methodology / operated SLA	Remove site-wide	High
Partnerships (incl. any Google relationship)	—	DO NOT PUBLISH	None	Real consented partnerships	Never imply Google endorsement or program status	Crit
Pricing (0 SEK / 79–129 SEK tiers)	CWF	VERIFY BEFORE PUBLISHING	Published on both properties	Confirmation pricing is decided and explained (range rationale)	Founder confirms or replaces with "pricing not yet announced" (Guide §14.11)	High
Product roadmap (themes + statuses)	RDR	WITH QUALIFICATION	None published	Agreed roadmap	Publish themes/statuses; no uncertain dates	Low
Institutional funding / investor names	OGR -relevant	DO NOT PUBLISH (unless real + consented)	None	A real round with public links	Founder verifies; publish only then	Crit
"Eligible for / applying to the Google startup program"	—	DO NOT PUBLISH	—	—	Program status never appears on the website; confidentiality applies to non-public program aspects	Crit

"EU AI Act ready / compliant by design"	CWF	VERIFY BEFORE PUBLISHING	Asserted, scope undefined (E37)	Legal scoping and basis	Remove now; reconsider after legal review	High
Swedish legal identity (name, org.nr, form, founding year)	CWF	PUBLISH NOW	Registry-checkable, consistently published (E36)	Certificate on file (internal)	Keep; fix county-name drift	Low

SECTION 19

19. Page-by-Page Change Matrix

CURRENT PAGE	CURRENT PURPOSE	CURRENT PROBLEM	RECOMMENDED FUTURE STATUS	REQUIRED CHANGES	PRIORITY
/ (Homepage)	Position Antutive as Swedish product-engineering firm; route to Discovery sales call	Build-for-hire hero; 1 product section of 11; unsupported stat bars; consulting ecosystem section; marquee of self-claims (E01–E15)	Keep and rewrite	Implement §11 flow: AI-first hero naming Famant, problem, mechanism cards with statuses, proof band, technology teaser, company strip, waitlist CTA; remove marquee, pain matrix, timeline, counters, DD section	Crit
/growth-marketing (“How We Work”)	Document client delivery methodology and segments	Pure services page; slug contradicts content (C5); zero AI (E19)	Remove + redirect (301 → /about)	Retire content; optionally distill one “how we build” culture paragraph into About	Crit
/custom-platform (“Custom Build”)	Sell bespoke engineering; engagement models; anti-agency comparison	The clearest excluded-category page on the site (E25–E26)	Remove + redirect (301 → /famant)	Retire in full	Crit
/products	Hybrid: service categories + Famant block + engagement tiers	Two-thirds services under a product title (C7, W12); Famant buried mid-page	Convert → /famant (301 from /products)	Rebuild as the Guide §14 product page; keep and expand the Famant block content; delete categories, tiers, roadmap, partnership block	Crit
/about	Legal identity, mission, values, DD ecosystem	Product absent entirely; services mission; humanly empty; AI Act claim; duplicated registration cards (C15, E37, E40)	Keep and rewrite	Product-first mission; founder profile(s); Famant present; single registration card; one defined DD line; remove AI Act claim and service values	Crit
/contact	Capture build enquiries; explain sales process	Seven service-only form options; SLA claims; consent without policy (E42–E44)	Keep and rewrite	New form options (product/press/partnership/general); consent links real policy; drop sales steps and SLA claims; keep email, hours, identity	High
Footer legal items (no pages)	Imply legal compliance	Non-clickable dead text (C12)	Add real pages (/privacy, /terms, /cookies)	Legally reviewed documents; functional links from footer and consent checkbox	Crit
(new) /technology	—	Does not exist; no AI/tech story anywhere (W4)	Add	Per §12 spec: Gemini roles, agent platform, GCP plan, evaluation, guardrails — planned labels	High
(new) /updates	—	No momentum surface exists (W20)	Add (post-application acceptable)	Dated updates + themed roadmap	Med
Error handling (any unrouted URL)	—	Unstyled React Router developer error (W8, E48)	Fix	Designed 404 with navigation; plus sitemap.xml, robots.txt, per-page metadata, og:image, prerender/SSR (W13)	High

SECTION 20

20. Content Requirements by Team

20.1 Founder

- **Decisions:** adopt the \$5 positioning; decide the services-business question (§15.1); decide the Famant launch/access statement and whether the published pricing stands; approve the Data Delimited relationship wording; select the target program tier after Phase-0 facts are known.
- **Facts and evidence:** certificate of incorporation and exact legal name; funding position with public links or a written “no qualifying funding” note; prior Google Cloud credit audit; country of primary business; authority to accept program terms; founder bio, photo and LinkedIn consent; business model on one page (a Start-tier criterion).
- **Approvals:** every claim in the §18 matrix marked “publish”; final copy sign-off against the no-false-information condition.

20.2 Product team

- Capability-by-capability status audit of Famant (the input for every status label on the site).
- Real screenshots of working screens; one recorded end-to-end AI flow (e.g. invitation → confirmed event + reminder, Guide §14.9).
- Accurate access/waitlist statement; themed roadmap with statuses; pricing confirmation or withdrawal; the problem/solution narrative facts.

20.3 Engineering team

- Documented intended architecture: Gemini model roles per capability; agent-platform usage (orchestration, tools, grounding, evaluation, deployment); Cloud Run / Cloud SQL / Cloud Storage / Firebase / observability / security plan; environment and project structure; data-region intentions (Guide §18 Phase 5).
- Verification of every technical statement on /technology and /famant; current Google product-name check on publication day and again on application day.
- Google Cloud account created from the @antutive.com mailbox; 18-character billing ID recorded; three-way domain match verified; six- and twelve-month cloud-spend forecast with stated assumptions (Guide §18 Phase 6).
- Implemented-controls inventory for any security statements; input to the AI data-processing disclosure.

20.4 Content team

- Rewrite: homepage (per §11), About, Contact; write: /famant, /technology, /updates seed content; the canonical one-line company and product descriptions; per-page titles and meta descriptions (replacing the single site-wide set, E46).
- Claim hygiene sweep: remove every §16.1 item everywhere it appears; enforce §9.3 vocabulary; single spelling “Famant”; British English maintained.
- Coordinate with famant.com so both properties carry the same product description, status and pricing statements (C10–C11).

20.5 Design team

- Product-first visual hierarchy: real UI screenshots as the hero-grade imagery (replacing abstract animation as the only visual); status-label component design; capability-card pattern; founder/company strip.
- Designed 404; og:image; consistent Famant product presentation tokens shared with famant.com; retain the existing design system otherwise (a documented strength).
- High-level only — visual direction serves credibility and product proof; no decorative redesign beyond that purpose.

20.6 Development team

- New routes /famant, /technology, /privacy, /terms, /cookies, /updates; 301 redirects: /growth-marketing→/about, /custom-platform→/famant, /products→/famant; remove template slugs and anchors (#geo, #saas).
- Per-page metadata, Open Graph image, sitemap.xml, robots.txt, designed 404, prerender or SSR so content exists in served HTML (E45); working footer legal links; rewritten contact form with consent linking the real policy; waitlist hand-off; mobile parity for the primary CTA (W25); scroll-reveal fallback so content is never invisible without scroll (W26).

- Link, mobile and metadata audit before submission (Guide Phase 3 item 14).

20.7 Legal / compliance

- Draft and review Privacy Policy, Terms, cookie handling; define the GDPR posture in specifics (replacing badge claims); review the consent flow.
- Qualified privacy advice on household and children's data before any public beta (Guide §17, Critical); review any EU AI Act statement before it ever returns; review the Google program terms (confidentiality, investor-disclosure consent) before acceptance; confirm what registered-address details may be published.

SECTION 21

21. Implementation Roadmap

Owners: F = Founder, P = Product, E = Engineering, C = Content, D = Design, Dev = Development, L = Legal. Phases 0–1 gate the application; Phases 2–3 should accompany it wherever possible; Phases 4–5 may follow it (Guide §12.2: recommended pages must not delay an otherwise-ready submission).

Phase 0 — Verification and founder decisions (gates everything)

TASK	OWNER	DEPENDENCY	PRIORITY	EXPECTED OUTPUT	COMPLETION EVIDENCE
Confirm incorporation facts (name, date, jurisdiction)	F	—	Crit	Confirmed company facts	Certificate on file
Determine funding position factually; select target tier	F	—	Crit	Tier decision (Scale+AI or Start)	Written decision + public links or absence note
Audit prior Google Cloud credits	E	—	Crit	Credit history statement	Written audit
Decide the services-business question	F	—	Crit	Product-only public positioning confirmed (or risk accepted & documented)	Signed internal note
Famant status audit: built vs planned, capability by capability; launch/pricing truth	P	—	Crit	Status table feeding all labels	Approved status document
Confirm intended Gemini/agent-platform/GCP architecture	E	Status audit	Crit	One-page architecture plan	Architecture document
Approve positioning, DD wording, founder publication	F	—	Crit	Approvals list	Sign-off record

Phase 1 — Critical application readiness

TASK	OWNER	DEPENDENCY	PRIORITY	EXPECTED OUTPUT	COMPLETION EVIDENCE
Create applicant mailbox on antutive.com; create GCP account from it; record 18-char billing ID; verify three-way domain match	E/F	Phase 0	Crit	Aligned identity chain	Console screenshot + written check
Site-wide removal of unsupported claims and agency framing (§16.1 list)	C/Dev	Phase 0 approvals	Crit	Clean site	Content audit against §18 matrix
Publish homepage AI-first positioning (interim edit acceptable ahead of full rebuild)	C/Dev	Positioning approval	Crit	Positioning live	Screenshot
Publish /famant with statuses and accurate access statement	P/C/Dev	Status audit	Crit	Product page live	Live URL
Publish legally reviewed Privacy, Terms, cookies; wire footer + consent links	L/Dev	Legal drafting	Crit	Working legal pages	Live URLs with effective dates
Correct/align famant.com naming, status and pricing statements	P/C	Phase 0 truth decisions	High	Consistent cross-property story	Both sites reviewed

Phase 2 — Product-first repositioning

TASK	OWNER	DEPENDENCY	PRIORITY	EXPECTED OUTPUT	COMPLETION EVIDENCE
------	-------	------------	----------	-----------------	---------------------

Full homepage rebuild per §11	C/D/Dev	Phase 1	Crit	Product-led homepage	Live page
New navigation + 301 redirects; retire service pages	Dev	Homepage rebuild	Crit	Product-first IA	Redirect tests
Rewrite About (mission, founder, single registration card, DD line)	C/F	Founder consent	Crit	New About	Live page
Rewrite Contact (form options, consent link, no SLA claims)	C/Dev	Legal pages	High	New Contact	Test submission
Waitlist journey with confirmation (branded hand-off if off-domain)	P/Dev	—	Med	Working waitlist path	Test signup

Phase 3 — AI and technology credibility

TASK	OWNER	DEPENDENCY	PRIORITY	EXPECTED OUTPUT	COMPLETION EVIDENCE
Publish /technology (Gemini roles, agent platform, GCP plan, evaluation, guardrails — planned labels)	E/C	Architecture plan	High	Technology page live	Live URL
Capture real screenshots; record one end-to-end demo	P	Working build	High	Proof media on Home + /famant	Published media
Cloud-spend forecast (6/12-month, stated assumptions)	E/F	Architecture plan	High	Forecast model (internal; supports application answers)	Forecast document
Google product-name verification pass	E	Before publication & application	High	Current naming everywhere	Dated check

Phase 4 — Trust and company credibility

TASK	OWNER	DEPENDENCY	PRIORITY	EXPECTED OUTPUT	COMPLETION EVIDENCE
Team/founder profiles with LinkedIn; company LinkedIn linked in footer	F/C	Consent	High	Human credibility	Live profiles
Security & Privacy page (implemented controls only); AI data-processing disclosure	E/L	Controls implemented	High	Trust pages	Live URLs
Responsible AI page (confirmation design, limits, minors)	P/L	Design decisions	High	Responsible AI page	Live URL
/updates with first dated entries + themed roadmap	C/P	Roadmap agreed	Med	Momentum surface	Live URL
2–4 substantive technical posts	E/C	—	Med	Depth evidence	Published posts

Phase 5 — Visual and experience polish

TASK	OWNER	DEPENDENCY	PRIORITY	EXPECTED OUTPUT	COMPLETION EVIDENCE
Designed 404; per-page metadata; og:image; sitemap; robots; prerender/SSR	Dev	New IA	High	Technical finish	Crawl audit
Mobile parity and responsiveness audit; scroll-reveal fallback	Dev/D	All pages live	High	Audit report	Report
Accessibility pass and statement; broken-link audit	Dev	—	Med	Compliance polish	Audit report

SECTION 22

22. Pre-Application Website Checklist

Status key: **WEBSITE-READY** (can be true today with website work alone) · **NEEDS VERIFICATION** (fact must be confirmed first) · **NEEDS IMPLEMENTATION** (something must be built first) · **EXTERNAL BLOCKER** (outside the website's power) · **N/A**.

AREA	CHECKLIST ITEM	STATUS
Company identity	Exact legal name (ANTUTIVE AB) used identically on site, email, billing, application	WEBSITE-READY
	Registration details published; county-name drift fixed; certificate filed internally	NEEDS VERIFICATION
	No excluded-category signals anywhere in public material	NEEDS IMPLEMENTATION
Product positioning	Homepage states AI-first product company; Famant in navigation with dedicated page	NEEDS IMPLEMENTATION
	Every capability carries an honest status label	NEEDS VERIFICATION (product audit)
	Launch/access and pricing statements corrected to fact	NEEDS VERIFICATION
AI-first evidence	Mechanism descriptions per capability; one end-to-end demo; real screenshots	NEEDS IMPLEMENTATION
	No generic AI hype; no unmeasured accuracy/benchmark claims	WEBSITE-READY (removal task)
Google Cloud alignment	Documented Gemini + agent-platform plan published with planned labels; current product names verified	NEEDS VERIFICATION + implementation
	No implication of Google partnership, endorsement or program status	WEBSITE-READY
Domain and email	Site live on antutive.com; applicant mailbox on the same domain	WEBSITE-READY
	Billing-account email domain matches site + email; 18-char ID recorded	EXTERNAL BLOCKER (operational setup)
Famant product proof	Real screenshots + demo published; waitlist journey working with confirmation	NEEDS IMPLEMENTATION
	famant.com and antutive.com aligned on name, description, status, pricing	NEEDS IMPLEMENTATION
Team and founder	Founder named with factual bio and LinkedIn; no invented team	NEEDS VERIFICATION (consent)
	Applicant role/title confirmed; authority to bind the company confirmed	NEEDS VERIFICATION
Legal and privacy	Privacy Policy, Terms, cookie handling live, reviewed, linked from footer and consent	NEEDS IMPLEMENTATION
	Children's/household data advice obtained before any public beta	EXTERNAL BLOCKER (legal work)
Technical quality	Designed 404; no template slugs; redirects live; mobile parity; working links	NEEDS IMPLEMENTATION
	Content present in served HTML (prerender/SSR)	NEEDS IMPLEMENTATION
SEO and metadata	Per-page titles/descriptions; og:image; sitemap.xml; robots.txt	NEEDS IMPLEMENTATION
Calls to action	Waitlist primary site-wide; no "book a build" CTAs remain	NEEDS IMPLEMENTATION
Application evidence	Evidence pack assembled per Guide §15 (incorporation, funding links or absence note, credit audit, product description, AI use-case, architecture, spend forecast)	NEEDS VERIFICATION
Unsupported claims	3x/24h/portfolio/AI-Act/blanket-GDPR/"full AI capabilities" removed; §18 matrix enforced; no users/revenue/funding/partnership claims	WEBSITE-READY (removal task)
Funding and eligibility blockers	Qualifying institutional funding confirmed (Scale/AI) or Start tier consciously targeted	EXTERNAL BLOCKER
	Prior credits within tier cap; only-one-incentive rule checked	EXTERNAL BLOCKER
	Working MVP + documented business model (if Start tier)	EXTERNAL BLOCKER (product reality)

Final gate	Official criteria pages re-read and screenshotted on submission day; every fact consistent across website, email, billing and application	NEEDS VERIFICATION
------------	---	--------------------

SECTION 23

23. Final Recommended Website Positioning

Antutive should present itself as:

An AI-first product company from Gothenburg, Sweden — a verifiable Swedish Aktiebolag whose purpose is building, operating and scaling its own AI-native product, with honesty about stage as a visible brand behaviour.

Antutive should no longer primarily present itself as:

A bespoke software development firm — no engagement models, client segments, delivery pricing, discovery-led sales funnel, IP-transfer promise, or agency-category comparisons anywhere in public material. These are not merely off-strategy; they map onto Google's mandatory exclusions.

Famant should be presented as:

Antutive's flagship product: an AI-powered family management and household coordination platform, with a top-level navigation item, a dedicated page, one consistent name and description across both owned domains, per-capability honest status labels, real screenshots, one genuine end-to-end demo, and an accurate access statement.

AI should be presented as:

The product's foundation, told through mechanisms — scheduling reasoning, conflict detection, task delegation, document understanding with OCR, confirmation-before-action — each statused, with planned Gemini and agent-platform usage described concretely and labelled planned until built. Never as a strapline, never as someone else's capability, never as an adjective.

Google Cloud should be presented as:

The intended technical foundation, on a dedicated technology page, using exact current Google product names, in planned language until implemented — with no implication of partnership, endorsement, credits or program participation, ever.

The homepage should communicate:

Within seconds: what Antutive is (AI-first product company), what it owns (Famant), what problem the product solves (the family coordination load), why AI is foundational (the assistant is the mechanism), what stage it is at (honest statuses), why it is credible (registry-verifiable identity + named founder), and what to do next (join the waitlist).

The strongest credibility evidence should be:

The pairing of registry-checkable Swedish legal identity with visible product proof — real screenshots and one recorded end-to-end AI flow — plus a named, LinkedIn-corroborated founder and working legal pages.

The most important content to remove should be:

The two service pages and all engagement/pricing machinery; the unsupported "3x faster" and "24h SLA" statistics; the implied portfolio; the Data Delimited consulting narrative; the blanket GDPR badges and the "EU AI Act compliant" claim; and the dead legal links.

The most important content to add should be:

The Famant product page with status labels; the homepage AI-first positioning; working Privacy Policy and Terms; the AI & Technology page carrying the planned Gemini/agent-platform architecture; the founder; and the product proof media.

The biggest application blocker that website changes cannot solve is:

The funding position. Without qualifying institutional or venture-capital equity funding, the Scale tier and its AI uplift (up to US\$350,000) are, on the published criteria, out of reach, and the realistic route is the Start tier at US\$2,000 — which itself requires a working MVP and a clear business model. Closely behind it: the billing/email/domain alignment and prior-credit audit, and the honest resolution of the services-revenue question. (Research Guide \$3, \$16, \$24.)

The final positioning recommendation is:

Rebuild antutive.com as the honest public proof of one focused claim: Antutive is an AI-first product company building Famant. Execute Phase 0 verification before touching copy; strip every excluded-category signal and every unverifiable claim; put Famant, its mechanisms and its statuses at the centre; publish the planned Google-stack architecture truthfully labelled; add the founder and the legal pages; and let the tier decision follow the facts — Scale with the AI uplift if qualifying funding exists, otherwise Start, with the same credible website serving either application. Every element of this strategy improves Antutive's truthful credibility as an AI-first, product-first startup; nothing in it asks the company to claim what it cannot evidence. **STRATEGIC RECOMMENDATION**

End of strategy document. Prepared 6 August 2026 from the two named source documents only; no company fact was invented, and all Google criteria cited must be re-verified on the official pages immediately before any application is submitted.
